

CONTENTS

ASTRONOMY AND ASTROPHYSICS

Astronomy and Astrophysics Volume 1

e-ISBN: 978-1-78021-000-1

ISBN : 978-1-78021-500-6

No. of Pages: 508

Astronomy and Astrophysics Volume 2

e-ISBN: 978-1-78021-001-8

ISBN : 978-1-78021-501-3

No. of Pages: 488

For more information of e-book and Print Volume(s) order, [please click here](#)

CONTENTS

VOLUME I

A History of Astronomy, Astrophysics and Cosmology **1**
 Malcolm Longair, *Cavendish Laboratory, University of Cambridge, JJ Thomson Avenue, Cambridge CB3 0HE, UK*

1. Introduction
2. Prehistoric, Ancient and Mediaeval Astronomy up to the Time of Copernicus
3. The Copernican, Galilean and Newtonian Revolutions
4. From Astronomy to Astrophysics – the Development of Astronomical Techniques in the 19th Century
5. The Classification of the Stars – the Harvard Spectral Sequence
6. Stellar Structure and Evolution to 1939
7. The Galaxy and the Nature of the Spiral Nebulae
8. Astrophysical Cosmology up to 1939
9. The Opening Up of the Electromagnetic Spectrum and the New Astronomies
10. Stars and Stellar Evolution from 1945
11. The Interstellar Medium
12. Galaxies, Clusters Of Galaxies and the Large Scale Structure of the Universe
13. Active Galaxies, General Relativity and Black Holes
14. Classical Cosmology since 1945
15. The Evolution of Galaxies and Active Galaxies with Cosmic Epoch
16. The Origin of Galaxies and the Large-Scale Structure of The Universe
17. The Very Early Universe

High Energy Astronomy From the Ground **131**
 Felix Aharonian, *Dublin Institute for Advanced Studies, Dublin, Ireland and Max Planck Institut für Kernphysik, Heidelberg, Germany*

1. Introduction
2. Cosmic Rays
 - 2.1 Brief History and Detection Methods
 - 2.2. Basic Facts
 - 2.3 Origin of Galactic Cosmic Rays
 - 2.4 Extragalactic Cosmic Rays
3. Ground-based gamma ray astronomy
 - 3.1 Detection Techniques
 - 3.2 Very High Energy Gamma-Ray Sources
 - 3.3 Outlook for Future
4. High Energy Neutrino Astronomy

Observatories in Space **159**
 Catherine Turon, *GEPI-UMR CNRS 8111, Observatoire de Paris, Section de Meudon, 92195 Meudon, France*

1. Introduction
2. The impact of the Earth atmosphere on astronomical observations
3. High-energy space observatories
 - 3.1. Gamma-Ray Space Observatories
 - 3.2. X-Ray Space Observatories
4. Optical-Ultraviolet space observatories
 - 4.1. Ultraviolet Space Observatories
 - 4.2. Optical Space Observatories
5. Infrared and Microwave Space Observatories
 - 5.1. Infrared Space Observatories
 - 5.2. Far-Infrared - Sub-Millimeter Space Observatories

- 5.3 Millimeter-Sub-Millimeter Space Observatories
- 6. Gravitational waves space observatories
- 7. Conclusion

Explorations in Space: Astronomy in the Space Age

218

Erik Tandberg, *Søndreveien 4 K, 0378 Oslo, Norway*

- 1. The First Satellites
- 2. Towards the Moon
 - 2.1. The Apollo Program
 - 2.2. Soviet Plans for a Manned Lunar Landing
 - 2.3. A New Wave of Soviet Lunar Probes
 - 2.4. Lunar Probes in Recent Years
- 3. Exploring Other Members of the Solar System
 - 3.1. The Sun
 - 3.2. Mercury
 - 3.3. Venus
 - 3.4. Mars
 - 3.5. Jupiter
 - 3.6. Saturn
 - 3.7. Uranus
 - 3.8. Neptune
 - 3.9. Asteroids
 - 3.10. Comets
 - 3.11. Dwarf Planets

The Motion of Celestial Bodies

263

Kaare Aksnes *Institute of Theoretical Astrophysics University of Oslo, Norway*

- 1. Introduction
- 2. Two-body problem
 - 2.1. Orbit in Space
 - 2.2. Determination of Orbits from Observations
- 3. Three-body problem
- 4. Perturbations of planets and satellites
- 5. Dynamics of asteroids and planetary rings
- 6. Dynamics of artificial satellites and space probes
- 7. Tides
- 8. Non-gravitational perturbations
- 9. Dynamical evolution and stability of the Solar System
- 10. Conclusion

Our Sun: The Nearest Star

290

Jack Bernard Zirker *Astronomer Emeritus at the U.S. National Solar Observatory, USA*

- 1. Introduction
 - 1.1. The Core
- 2. The radiative zone
- 3. The convection zone
- 4. The photosphere
- 5. The chromosphere
- 6. The magnetic sun
- 7. The transition zone
- 8. The corona
- 9. The solar wind
- 10. The heliosphere
- 11. The solar cycle
- 12. Helioseismology and the Rotation of the Solar Interior

13. The dynamo and the solar cycle
14. Solar activity
15. Heating the corona and accelerating the solar wind
16. The Sun's Influence on the Earth

Planets of Our Solar System

349

Iwan P. Williams , *Astronomy Unit, Queen Mary University of London, London UK*

1. Introduction
2. The Copernican Revolution
3. New telescopes - New discoveries
 - 3.1. The Titius-Bode Law
 - 3.2. The Discovery of Uranus
 - 3.3. Four New Planets
 - 3.4. The Discovery of Neptune
 - 3.5. The Asteroid Belt is discovered
 - 3.6. The Discovery of Pluto
 - 3.7. The True Size of Pluto
4. Trans Neptunian Objects
 - 4.1. The Edgeworth-Kuiper Belt is discovered
5. Planets and Dwarf Planets
6. The larger members of the Solar System
 - 6.1. Mercury
 - 6.2. Venus
 - 6.3. Earth
 - 6.4. The Moon
 - 6.5. Mars
 - 6.6. Ceres
 - 6.7. Jupiter
 - 6.8. Io
 - 6.9. Europa
 - 6.10. Ganymede
 - 6.11. Callisto
 - 6.12. Saturn
 - 6.13. Titan
 - 6.14. Uranus
 - 6.15. Neptune
 - 6.16. Triton
 - 6.17. Pluto
 - 6.18. Haumea
 - 6.19. Makemake
 - 6.20. Eris
 - 6.21. Other Large Bodies
7. Extra-solar Planets
8. Conclusions

Extra-Solar Planetary Systems

380

Alfred Vidal-Madjar *Institut d'Astrophysique de Paris, CNRS (UMR 7095), Université Pierre et Marie Curie, 98 bis boulevard Arago, 75014 Paris, France*

1. Introduction
2. What is an extra-solar planet?
3. Planetary system formation
4. The different detection techniques and search strategies for extra-solar planets.
 - 4.1. Search by the Timing Method
 - 4.2. Search by the Radial Velocity Method
 - 4.3. Search by the Transit Method

- 4.4. Search via the Gravitational Microlensing Effect
- 4.5. Search via the Detection of their Magnetospheric Emissions
- 5. Main characteristics of the discovered extra-solar planets, planetary systems and host stars
- 6. Prospective related to these searches: looking for another “Earth”
- 7. Conclusion

The Physics of Stars **415**
 Christopher A. Tout *University of Cambridge, Institute of Astronomy, The Observatories, Madingley Road, Cambridge CB3 0HA, England.*

- 1. Introduction
- 2. Observable Quantities
- 3. Structural Equations
- 4. Equation of State
- 5. Radiation Transport
- 6. Convection
- 7. Energy Generation
- 8. Boundary Conditions
- 9. Evolutionary Tracks
- 10. Mass Loss
- 11. White Dwarfs
- 12. Supernovae, Neutron Stars and Black Holes
- 13. Metallicity
- 14. Conclusions

Index **445**

About EOLSS **451**

VOLUME II

Single Stars **1**
 Sylvie D. Vauclair, *Institut de Recherches en Astronomie et Planétologie, Université de Toulouse, Institut Universitaire de France, 14 avenue Edouard Belin, 31400 Toulouse, France*
 Gérard P. Vauclair, *Institut de Recherches en Astronomie et Planétologie, Université de Toulouse, Centre National de la Recherche Scientifique, 14 avenue Edouard Belin, 31400 Toulouse, France*

- 1. Introduction
- 2. Stellar observational data
 - 2.1. Distances
 - 2.2. Stellar Luminosities
 - 2.3. Surface Temperatures
 - 2.4. Stellar Spectroscopy
 - 2.5. Masses and Radii
- 3. Stellar structure and evolution
 - 3.1. Color-Magnitude Diagrams
 - 3.2. Stellar Structure
 - 3.3. Stellar Evolution
 - 3.4. Stars and Stellar Environment: Recent Developments
- 4. Variable stars and asteroseismology
 - 4.1. Classical Pulsating Stars
 - 4.2. Solar Oscillations
 - 4.3. Stellar Oscillations
 - 4.4. Basics of Asteroseismology
- 5. Late stages of stellar evolution
 - 5.1. Late Evolution of Low Mass Stars

- 5.2 .White Dwarfs
- 5.3. Late Evolution of Massive Stars
- 6. Conclusion

The Milky Way Galaxy

50

James Binney , *Physics Department Oxford University, UK.*

- 1. Introduction
- 2. Recognition of the size of the Milky Way
- 3. The Center
- 4. The bulge-bar
 - 4.1. History of the Bulge
- 5. Globular clusters
- 6. Satellites
- 7. The disc
 - 7.1 Spiral Structure
 - 7.2. Interstellar Gas
 - 7.3. Moving Groups, Associations and Star Clusters
 - 7.4. The Thick Disc
 - 7.5. Local Mass Density
- 8. The dark halo

Galaxies

80

K.C. Freeman , *Research School of Astronomy & Astrophysics. The Australian National University, Australia.*

- 1. History
- 2. Disk galaxies
 - 2.1. The Hubble Classification
 - 2.2. The Light Distribution in Disk Galaxies
 - 2.3. The Rotation of Disk Galaxies
 - 2.4. The Gas Content of Disk Galaxies
 - 2.5. Star Formation Law in Disks
 - 2.6. Star Formation History of Disks
 - 2.7. The Tully-Ficher Law
 - 2.8. Bars
 - 2.9. Bulges
 - 2.10. Thick disks
 - 2.11. S0 Galaxies
- 3. Elliptical Galaxies
 - 3.1. The Hubble Classification
 - 3.2. The Light Distribution in Elliptical Galaxies
 - 3.3. Diskiness and Boxiness
 - 3.4. The Rotation of Ellipticals
 - 3.5. The Fundamental Plane
 - 3.6. Metallicity Effects in Elliptical Galaxies
 - 3.7. Dwarf Ellipticals
 - 3.8. The Formation of Ellipticals
 - 3.9. The Inner Regions of Ellipticals
 - 3.10. Central Massive Dark Objects in Early Type Galaxies
 - 3.11. Black Holes and the Inner Structure of Early Type Galaxies
 - 3.12. Dark Matter in Elliptical Galaxies
- 4. Dwarf Galaxies
 - 4.1. Dwarf Irregular Galaxies
 - 4.2. Dwarf Spheroidal Galaxies
- 5. Groups and Clusters of Galaxies
- 6. Conclusion

Active Galactic Nuclei**112**

Suzy Collin , *LUTH, Observatoire de Paris, CNRS, Université Paris Diderot; 5 Place Jules Janssen, 92190 Meudon, France*

Bożena Czerny, *N. Copernicus Astronomical Centre, Bartycka 18, 00-716 Warsaw, Poland*

1. Historical aspects
 - 1.1. Prehistory
 - 1.2. After the Discovery of Quasars
 - 1.3. Accretion Onto Supermassive Black Holes: Why It Works So Well?
2. The emission properties of radio-quiet quasars and AGN
 - 2.1. The Broad Band Spectrum: The “Accretion Emission”
 - 2.2. Optical, Ultraviolet, and X-Ray Emission Lines
 - 2.3. Ultraviolet and X-Ray Absorption Lines: The Wind
 - 2.4. Variability
3. Related objects and Unification Scheme
 - 3.1. The “zoo” of AGN
 - 3.2. The “Line of View” Unification: Radio Galaxies and Radio-Loud Quasars, Blazars, Seyfert 1 and 2
 - 3.3. Towards Unification of Radio-Loud and Radio-Quiet Objects?
 - 3.4. The “Accretion Rate” Unification: Low and High Luminosity AGN
4. Evolution of black holes
 - 4.1. Supermassive Black Holes in Quasars and AGN
 - 4.2. Supermassive Black Holes in Quiescent Galaxies
5. Linking the growth of black holes to galaxy evolution
6. Conclusions

Dark Matter**152**

Jaan Einasto , *Tartu Observatory, 61602, Toravere, Tartumaa, Estonia*

1. Dark Matter problem as a scientific revolution
2. Early evidence of the existence of dark matter
 - 2.1 Local Dark Matter
 - 2.2 Global Dark Matter – Clusters, Groups and Galaxies
 - 2.3 Rotation Curves of Galaxies
 - 2.4 Mass Paradox in Galaxies from Galactic Models
3. Dark Matter in astronomical data
 - 3.1 Stellar Motions
 - 3.2 Dynamics and Morphology of Companion Galaxies
 - 3.3 Extended Rotation Curves of Galaxies
 - 3.4 X-Ray Data on Galaxies and Clusters of Galaxies
 - 3.5. Galactic and Extragalactic Gravitational Lensing
4. The nature of Dark Matter
 - 4.1 Nucleosynthesis Constraints on the Amount of Baryonic Matter
 - 4.2 Baryonic Dark Matter
 - 4.3 Non-Baryonic Dark Matter and Fluctuations of the CMB Radiation
 - 4.4 Alternatives to Dark Matter
5. Dark Matter and structure formation
 - 5.1 The Distribution of Galaxies and Clusters
 - 5.2 Superclusters, Filaments and Voids
 - 5.3 Structure Formation in the Cold Dark Matter Scenario
6. Matter-energy content of the Universe
 - 6.1 Dark Matter and Dark Energy
 - 6.2 The Role of Dark Energy in the Evolution of the Universe
7. Conclusions

Expansion of the Universe – Standard Big Bang Model**199**

Matts Roos, *Department of Physics, University of Helsinki, Helsinki, Finland*

1. Historical cosmology
2. Olbers' paradox
3. Hubble's law
4. Special Relativity and metrics
5. Distance measures
6. General Relativity
7. Tests of General Relativity
8. Gravitational lensing
9. Black holes
10. Friedmann-Lemaître cosmology
11. Thermal history of the Universe
12. Cosmic inflation
13. Cosmic Microwave Background Radiation
14. Large Scale Structure
15. Dark Matter
16. Dark Energy
17. Conclusions

“Let there be Light”: The Emergence of Structure Out of the Dark Ages in the Early Universe 237

Abraham Loeb *Department of Astronomy, Harvard University, 660 Garden St., Cambridge MA, 02138, USA.*

1. Introduction
 - 1.1. Observing Our Past
 - 1.2. The Expanding Universe
2. Galaxy Formation
 - 2.1. Growth of Linear Perturbations
 - 2.2. Halo Properties
 - 2.3. Formation of the First Stars
 - 2.4. Gamma-Ray Bursts: Probing the First Stars One Star at a Time
 - 2.5. Supermassive Black Holes
 - 2.6. The Epoch of Reionization
 - 2.7. Post-Reionization Suppression of Low-Mass Galaxies
3. Probing the Diffuse Intergalactic Hydrogen
 - 3.1. Lyman-Alpha Absorption
 - 3.2. 21-cm Absorption or Emission
4. Conclusions

Big Bang Nucleosynthesis

289

Marco Limongi, *Istituto Nazionale di Astrofisica – Osservatorio Astronomico di Roma, ITALY*

1. Introduction
2. Brief Historical Overview
3. The Standard Hot Big Bang Model
 - 3.1 Basic Assumptions.
 - 3.2 Thermodynamic History of the Universe
 - 3.3 Big Bang Nucleosynthesis Chronology
 - 3.4 Big Bang Nucleosynthesis Abundances
4. Nonstandard Big Bang Nucleosynthesis
5. Observed Primordial Abundances
 - 5.1 Deuterium
 - 5.2 ^3He
 - 5.3 ^4He
 - 5.4 ^7Li
6. The Baryon Density from the SBBN
7. The Baryon Density from the Cosmic Microwave Background (CMB) Radiation
8. Reconciling CMB and BBN in Non Standard Cosmological Models

9. Conclusions

Chemical Enrichment of the Universe by Stars

319

John C. Lattanzio , *Monash Centre for Astrophysics, School of Mathematical Sciences, Monash University, Australia.*

1. Introduction
2. Nuclear reactions in stars
 - 2.1. Hydrogen Burning
 - 2.2. Helium Burning
 - 2.3. Carbon Burning
 - 2.4. Neon Burning
 - 2.5. Oxygen Burning
 - 2.6. Silicon Burning
 - 2.7. Neutron Capture
3. Nucleosynthesis in stars
 - 3.1. Dependence on Mass
 - 3.2. The Lowest Masses
 - 3.3. Low and Intermediate Masses
 - 3.4. The Asymptotic Giant Branch
 - 3.5. Super-AGB Stars
 - 3.6. Massive Stars
 - 3.7 Binary Star Evolution
 - 3.8. The r-Process?
4. Chemical evolution
5. Conclusion

Environmental challenges in Astronomy

360

Paul Murdin , *Institute of Astronomy, Cambridge, UK*

1. The Detection of an Astronomical Signal and the Environment
2. Optical and Near Infrared Astronomy
 - 2.1. Natural environmental challenges
 - 2.2. Artificial Environmental Challenges
 - 2.3. Mitigation
3. Radio Observatories
 - 3.1. The Natural Environment
 - 3.2. The Artificial Environment
 - 3.3. Mitigation
4. Infrared and Millimeter Astronomy
5. Geophysical Observatories
6. Environmental Challenges *by* Astronomy
7. Planetary Protection
8. Relevant Organizations

Climate and Weather of the Sun - Earth System

397

Ilya Usoskin , *Sodankylä Geophysical Observatory and Department of Physical Sciences, University of Oulu, Finland*

Natalie Krivova , *Max-Planck-Institut für Sonnensystemforschung, Katlenburg-Lindau, Germany*

1. Introduction: Space weather and Space climate
2. Solar variability
 - 2.1. Short-term scale (Minutes-days)
 - 2.2. Mid-term scale (weeks-years)
 - 2.3. Long-term scale (decades-millennia)
3. Solar irradiance
 - 3.1 Measurements of solar irradiance

3.2 Mechanisms and reconstructions of solar irradiance variation	
3.3. Earth orbital variability (Milanković cycles)	
4. Energetic particle environment	
4.1. Galactic cosmic rays	
4.2. Solar energetic particles	
4.3. Energetic particles of magnetospheric origin	
4.4. Solar wind and magnetospheric disturbances	
5. Sun-Earth relations and implications for the Earth climate	
5.1. Does solar variability affect the climate (empirical evidences)?	
5.2. Possible mechanisms	
5.3. Anthropogenic influence	
6. Conclusion
