

PETROLEUM SCIENCE AND ENGINEERING

Petroleum: Chemistry, Refining, Fuels and Petrochemicals -Volume I

No. of Pages: 289

ISBN: 978-1-78021-003-2 (eBook)

ISBN: 978-1-78021-503-7 (Print Volume)

Pipeline Engineering -Volume II

No. of Pages: 509

ISBN: 978-1-78021-004-9 (eBook)

ISBN: 978-1-78021-504-4 (Print Volume)

Petroleum Engineering – Upstream -Volume III

No. of Pages: 425

ISBN: 978-1-78021-005-6 (eBook)

ISBN: 978-1-78021-505-1 (Print Volume)

Petroleum Engineering – Upstream - Volume IV

No. of Pages: 431

ISBN: 978-1-78021-006-3 (eBook)

ISBN: 978-1-78021-506-8 (Print Volume)

Petroleum Engineering – Downstream -Volume V

No. of Pages: 373

ISBN: 978-1-78021-007-0 (eBook)

ISBN: 978-1-78021-507-5 (Print Volume)

Petroleum Engineering – Downstream -Volume VI

No. of Pages: 427

ISBN: 978-1-78021-045-2 (eBook)

ISBN: 978-1-78021-545-7 (Print Volume)

CONTENTS

Preface

xxiii

VOLUME I

Petroleum: Chemistry, Refining, Fuels and Petrochemicals - Basics **1**
 James G. Speight, 2476 Overland Road, Laramie, WY 82070-4808, USA

1. Definitions and Terminology
 - 1.1. Native Materials
 - 1.2. Manufactured Materials
 - 1.3. Derived Materials
2. Composition
 - 2.1. Elemental Composition
 - 2.2. Chemical Composition
 - 2.3. Composition by Distillation
 - 2.4. Fractional Composition
3. Properties
 - 3.1. Physical Properties
 - 3.2. Thermal Properties
 - 3.3. Electrical Properties
 - 3.4. Optical Properties
 - 3.5. Spectroscopic Properties
 - 3.6. Molecular Weight

Petroleum: Chemistry, Refining, Fuels and Petrochemicals – Refining **57**
 James G. Speight, 2476 Overland Road, Laramie, WY 82070-4808, USA

1. Introduction
2. Dewatering and Desalting
3. Distillation
 - 3.1. Atmospheric Distillation
 - 3.2. Vacuum Distillation
 - 3.3. Azeotropic and Extractive Distillation
4. Thermal Processes
 - 4.1. Thermal Cracking
 - 4.2. Steam Cracking
 - 4.3. Visbreaking
 - 4.4. Coking
5. Catalytic Processes
 - 5.1. Processes
 - 5.2. Catalysts
6. Hydroprocesses
 - 6.1. Hydrocracking
 - 6.2. Hydrotreating
7. Reforming Processes
 - 7.1. Thermal Reforming
 - 7.2. Catalytic Reforming
 - 7.3. Catalysts
8. Isomerization Processes
 - 8.1. Processes
 - 8.3. Catalysts
9. Alkylation Processes
 - 9.1. Processes
 - 9.2. Catalysts

- 10. Polymerization Processes
 - 10.1. Processes
 - 10.2. Catalysts
- 11. Solvent Processes
 - 11.1. Extraction
 - 11.2. Deasphalting
 - 11.3. Dewaxing
- 12. Treating Processes
- 13. Asphalt Production
- 14. Hydrogen Production
- 15. Other Refining Operations

Petroleum: Chemistry, Refining, Fuels and Petrochemicals - Product Treating

99

James G. Speight, 2476 Overland Road, Laramie, WY 82070-4808, USA

- 1. Introduction
- 2. Caustic Processes
 - 2.1. Dualayer Distillate Process
 - 2.2. Dualayer Gasoline Process
 - 2.3. Electrolytic Mercaptan Process
 - 2.4. Ferrocyanide Process
 - 2.5. Lye Treatment
 - 2.6. Mercapsol Process
 - 2.7. Polysulfide Treatment
 - 2.8. Sodasol Process
 - 2.9. Solutizer Process
 - 2.10. Steam Regenerative Caustic Treatment
 - 2.11. Unisol Process
- 3. Acid Processes
 - 3.1. Nalfining Process
 - 3.2. Sulfuric Acid Treatment
- 4. Clay and Related Processes
 - 4.1. Alkylation Effluent Treatment
 - 4.2. Arosorb Process
 - 4.3. Bauxite Treatment
 - 4.4. Continuous Contact Filtration Process
 - 4.5. Cyclic Adsorption Process
 - 4.6. Gray Clay Treatment
 - 4.7. Percolation Filtration Process
 - 4.8. Thermoform Continuous Percolation Process
- 5. Oxidative Processes
 - 5.1. Bender Process
 - 5.2. Copper Sweetening Process
 - 5.3. Doctor Process
 - 5.4. Hypochlorite Sweetening Process
 - 5.5. Merox Process
- 6. Solvent Processes
 - 6.1. Deasphalting
 - 6.2. Solvent Refining
 - 6.3. Dewaxing
- 7. Gas Treating

Petroleum: Chemistry, Refining, Fuels and Petrochemicals – Petrochemicals

134

James G. Speight, 2476 Overland Road, Laramie, WY 82070-4808, USA

- 1. Introduction
- 2. Chemicals from Paraffins
 - 2.1. Halogenation

- 2.2. Nitration
- 2.3. Oxidation
- 2.4. Alkylation
- 3. Chemicals from Olefins
 - 3.1. Hydroxylation
 - 3.2. Halogenation
 - 3.3. Oxidation
 - 3.4. Miscellaneous
- 4. Chemicals from Aromatics
- 5. Chemicals from Acetylene
- 6. Chemicals from Natural Gas
- 7. Inorganic Petrochemicals
- 8. Chemicals from Synthesis Gas

Petroleum: Chemistry, Refining, Fuels and Petrochemicals - Petroleum Products

161

James G. Speight, 2476 Overland Road, Laramie, WY 82070-4808, USA

- 1. Introduction
- 2. Gaseous Fuels
 - 2.1. Composition
 - 2.2. Manufacture
 - 2.3. Properties and Uses
- 3. Gasoline
 - 3.1. Composition
 - 3.2. Manufacture
 - 3.3. Properties and Uses
 - 3.4. Octane Numbers
 - 3.5. Additives
- 4. Solvents (Naphtha)
 - 4.1. Composition
 - 4.2. Manufacture
 - 4.3. Properties and Uses
- 5. Kerosene
 - 5.1. Composition
 - 5.2. Manufacture
 - 5.3. Properties and Uses
- 6. Fuel Oil
- 7. Lubricating Oil
 - 7.1. Composition
 - 7.2. Manufacture
 - 7.3. Properties and Uses
- 8. White Oil, Insulating Oil, and Insecticides
 - 8.1. White Oil
 - 8.2. Insulating Oil
 - 8.3. Insecticides
- 9. Grease
 - 9.1. Lime Soap
 - 9.2. Soda Soap
 - 9.3. Lithium and Barium Soap
 - 9.4. Aluminum Soap
 - 9.5. Cold Sett Grease
- 10. Wax
 - 10.1. Composition
 - 10.2. Manufacture
 - 10.3. Properties and Uses
- 11. Asphalt
 - 11.1. Composition

- 11.2. Manufacture
- 11.3. Properties and Uses
- 12. Coke
- 13. Sulfonic Acids
- 14. Acid Sludge
- 15. Product Blending

Index	211
About EOLSS	217

VOLUME II

Pipeline Engineering	1
Y. Frank Cheng, <i>Department of Mechanical and Manufacturing Engineering, University of Calgary, Calgary, Alberta, Canada T2N 1N4</i>	

- 1. Introduction
- 2. Pipeline Engineering as a Discipline
- 3. Understand the Pipeline Engineering
 - 3.1. Pipeline Design and Construction
 - 3.2. Pipeline Operations
 - 3.3. Offshore Pipeline Operations
 - 3.4. Material Selection, Fabrication and Joining
 - 3.5. Pipeline Structural Integrity
 - 3.6. Instrumentation and Control
 - 3.7. Pipeline Maintenance
 - 3.8. Pumps and Compressor Operation
 - 3.9. Pipeline Geotechnical Engineering
 - 3.10. Environmental Conservation
 - 3.11. Coatings and Corrosion Protection
 - 3.12. Cathodic Protection
 - 3.13. Pipeline Stress Corrosion Cracking
- 4. Carbon Dioxide Pipelines
 - 4.1. Introduction
 - 4.2. Transportation of CO₂ by pipelines
 - 4.3. Integrity Management of CO₂ Pipelines
- 5. Pipeline Engineering in Perspective

Pipeline Operations	44
M. Mohitpour, <i>FASME, FEIC, President Tempsys Pipeline Solutions Inc. Canada.</i> Andrew Jenkins, <i>TransCanada PipeLines, Ltd. Canada.</i>	

- 1. Pipeline Operation
- 2. Gas Pipeline Operation
 - 2.1. Contracts and Services
 - 2.2. Pipeline Operations
- 3. Liquid Pipeline Operation
 - 3.1. Types of Liquid Pipelines
 - 3.2. Batching
 - 3.3. Liquid Pipeline Operational Control

Offshore Pipeline Operations	88
Marcio Martins Mourelle, <i>Petrobras Research and Development Center – CENPES, Rio de Janeiro, Brazil</i>	

- 1. Introduction

2. Installation and Construction
3. Types of Joints
4. Coatings and Corrosion Protection
5. Design Issues Related to Flowlines
 - 5.1. Wall Thickness Evaluation
 - 5.2. On-Bottom Stability
 - 5.3. Free Spans
 - 5.4. Thermo-Mechanical Effects
6. Design Issues Related to Risers
 - 6.1. Risers Configurations
 - 6.2. Extreme Loads
 - 6.3. Wave Induced Fatigue
 - 6.4. Vortex Induced Vibration
 - 6.5. Interference
7. Operations and Maintenance

Steel and Pipe Mill Technology

118

Keith Leewis, *Process Performance Improvement Consultants, 739 Kenwood Avenue Libertyville, IL 60048, USA*

1. Background
2. Historic Pipe Making Practices
3. Rolling Mill Configurations
 - 3.1. "U & O" Process:
 - 3.2. Roll Forming
 - 3.3. Spiral Pipe Process
 - 3.4. Continuous U&O Mills
 - 3.5. Seamless
4. Historic Seam Welding Processes
 - 4.1. Furnace Butt Joints
 - 4.2. Low Frequency Electric Resistance Welding (LF-ERW)
5. Current Seam Welding Processes for Straight And Spiral Welded Pipe.
 - 5.1. High Frequency Electric Resistance
 - 5.2. Dual Submerged Arc Welded
 - 5.3. Laser and Electron Beam
6. Mechanical Properties
 - 6.1. Grade
 - 6.2. Grade Substitution Caution
 - 6.3. Typical Mill Approaches to High Grade Pipe
7. Strengthening Mechanisms
 - 7.1. Solid Solution Strengthening
 - 7.2. Particle/Precipitate Strengthening
 - 7.3. Grain boundary Strengthening
 - 7.4. Work Hardening
8. Accelerated Cooling
9. Toughness
10. Chemistry
11. Major Alloying Constituents
12. Tramp and Residual Elements
13. Typical Microalloying Elements
14. Convenient Empirical Relationships to Avoid Weld Cracking
15. Steel Making Practices
 - 15.1. Acid vs Basic Refractories
 - 15.2. Open Hearth
 - 15.3. Basic Oxygen Furnace
 - 15.4. Electric Furnace
16. Ladle Metallurgy
 - 16.1. Alloying and Cleanliness Control Is In the Liquid State

- 16.2. Centerline Lamination Considerations and Temperature Control
- 17. Solidification
 - 17.1. Ingot Cast Steels:
 - 17.2. Continuous Casting
 - 17.3. Segregation Only Occurs In the Liquid State
- 18. Sampling QA/QC is used to ensure that acceptable pipe leaves the mill
- 19. Testing Line Pipe to Yield
- 20. Tensile Testing of In-service Pipe and the Bauschinger Effect
 - 20.1. Result of the FBE Thermal Cycle
 - 20.2. Mechanisms:
 - 20.3 Practical Effects:
 - 20.4. Note of caution
- 21. Variability in Pipe Properties
 - 21.1. FBE Heating Cycle
 - 21.2. Rolling/Alloying Variation
 - 21.3. Parameter Variation

Pipeline Structural Integrity

163

Roman W. Motriuk, *ARCUS Solutions Inc., Stn. D Calgary, Alberta, Canada T2P 2E7*

- 1. Pipeline Structural Integrity Definition
- 2. Pipeline Structural Integrity throughout History and Today
- 3. Overview of Potential Factors Leading to Structural Integrity Breach
 - 3.1. Internal Pressure
 - 3.2. Stresses within the Pipe Wall
 - 3.3. Piping Vibration
 - 3.4. Pipe-Soil Interaction
 - 3.5. Pipeline Material
 - 3.6. Pipeline Corrosion and Erosion
 - 3.7. Pipeline Weld Flaws
 - 3.8. External Damage – Third Party
 - 3.9. Incorrect Operation and Operating Errors
 - 3.10. Earthquake
- 4. Piping Structural Integrity Evaluation
- 5. Integrity Management Programs
 - 5.1. Prescriptive Integrity Programs
 - 5.2. Performance-Based Integrity Programs
- 6. Pipeline Integrity Breach
 - 6.1. Regulatory Response to Pipeline Integrity Breaches
- 7. Analyses Supporting Structural Integrity and Management Programs
 - 7.1. Analysis of Threats
 - 7.2. Regulatory Prescribed Risk Analysis
 - 7.3. Risk Analysis Results
- 8. Preventing Failures
- 9. Pipeline Structural Integrity and Training
 - 9.1. The Value of Training
 - 9.2. Training Options

Pipeline System Automation and Control

210

C. Bruce Warren and Mike S. Yoon, *BCT Group and Yoon Consulting, Canada.*

- 1. Supervisory Control and Data Acquisition (SCADA) System
 - 1.1 History
 - 1.2. SCADA System Architecture
 - 1.3. Communications
 - 1.4. Data Management
 - 1.5. Human Machine Interface (HMI) and Reporting
 - 1.6. Alarm Processing

- 1.7. Remote Terminal Unit (RTU)
- 1.8. Security
- 1.9. Corporate Integration
- 2. Measurement System
 - 2.1. Measurement Performance
 - 2.2. Measurement Units
 - 2.3. Flow Measurements
- 3. Station Control
 - 3.1. Station Control System Architecture
 - 3.2. Station Control Methods
 - 3.3. Station Operation
 - 3.4. Meter Station Operation
 - 3.5. Tank Farm Operation
- 4. Conclusion

Pump and Compressor Operation

245

Thomas Van Hardeveld, *Strategic Maintenance Solutions Inc., Canada*

- 1. Introduction
- 2. Operation of Pump and Compressor Stations
 - 2.1. General
 - 2.2. Unit Selection
 - 2.3. Compressor Station Layout
 - 2.4. Pump Station Layout
 - 2.5. Oil Terminals
 - 2.6. Station Control Systems
 - 2.7. Safety Systems
 - 2.8. Compressor Station Systems
 - 2.9. Pump Station Systems
- 3. Operation of Pump and Compressor Drivers
 - 3.1. Gas Turbines
 - 3.2. Internal Combustion Engines
 - 3.3. Electric Motors
- 4. Operation of Pumps and Compressors
 - 4.1. Centrifugal Pumps
 - 4.2. Reciprocating Compressors
 - 4.3. Centrifugal Compressors
- 5. Performance of Pumps and Compressors
 - 5.1. Centrifugal Pumps
 - 5.2. Reciprocating Compressors
 - 5.3. Centrifugal Compressors
- 6. Maintenance of Pumps and Compressors
 - 6.1. Asset Management
 - 6.2. Station Maintenance
 - 6.3. Pump and Compressor Drivers
 - 6.4. Pumps and Compressors
- 7. Conclusion

Pipeline Geotechnical Engineering

318

Dharma Wijewickreme and Lalinda Weerasekara, *Department of Civil Engineering, University of British Columbia, Canada*

- 1. Introduction
- 2. Typical Pipeline Materials
- 3. Methods of Pipeline Installation
 - 3.1. Trenched (Open cut) Installations

- 3.2. Trenchless Installations
- 4. Geotechnical Engineering Considerations
 - 4.1. Geotechnical Site Investigation Requirements
 - 4.2. General Considerations for Pipeline Installation
- 5. Soil Loads on Pipelines during Construction and General Operational Conditions
 - 5.1. Static Loads
 - 5.2. Live loads
 - 5.3. Buoyancy Forces
 - 5.4. Thermal Loads
 - 5.5. Deformation of the Pipe due to Soil Stresses in Low Pressure Pipes
 - 5.6. Evaluation of the Structural Performance of Buried Pipelines
- 6. Geotechnical Hazards Impacting Pipeline Performance
 - 6.1. Permanent Ground Deformation Hazard
 - 6.2. Volcanic Hazards
 - 6.3. Estimation of Permanent Ground Deformations
- 7. Assessment of Pipeline Performance under Permanent Ground Deformations
 - 7.1. Structural Assessment of Pipe-soil Interaction Problem
 - 7.2. Representation of Soil-pipe Interaction under Relative Lateral Soil Movements
 - 7.3. Response to Longitudinal Ground Movements
 - 7.4. Response to Vertical Uplift and Downward Bearing
- 8. Protection of Pipelines from Geotechnical Hazards
- 9. Field Monitoring and Testing of Pipeline Performance
- 10. Conclusion

Environmental Conservation Practices for Pipelines

362

Tamara Petter and Dean F. Mutrie, *TERA Environmental Consultants, Calgary, Alberta, Canada*

- 1. Introduction
 - 1.1. Pipeline Construction in Brief
- 2. Environmental Conservation through Pipeline Route Selection
- 3. Soil Conservation
 - 3.1. Potential Impacts
 - 3.2. Timing of Construction
 - 3.3. Construction Techniques
- 4. Aquatic Ecosystem Conservation
 - 4.1. Potential Impacts
 - 4.2. Timing of Construction
 - 4.3. Construction Techniques
- 5. Wetland Conservation
 - 5.1. Potential Impacts
 - 5.2. Timing of Construction
 - 5.3. Construction Techniques
- 6. Native Vegetation Conservation
 - 6.1. Potential Impacts
 - 6.2. Timing of Construction
 - 6.3. Construction Techniques
- 7. Wildlife Conservation
 - 7.1. Potential Impacts
 - 7.2. Timing of Construction
 - 7.3. Construction Techniques
- 8. Heritage Resources Conservation
 - 8.1. Potential Impacts
 - 8.2. Timing of Construction
 - 8.3. Construction Techniques
- 9. Conservation of Lands used for Traditional Purposes
 - 9.1. Potential Impacts
 - 9.2. Timing of Construction

- 9.3. Construction Techniques
- 10. Environmental Protection Plans and Environmental Inspection
 - 10.1. Environmental Protection Plan
 - 10.2. Environmental Inspection
- 11. Environmental Conservation during Operations
- 12. Concluding Remarks

Cathodic Protection of Pipelines **394**
 William J.D. Shaw, *Department of Mechanical & Manufacturing Engineering, Schulich School of Engineering, University of Calgary, Calgary, Alberta, Canada*

- 1. History
- 2. Understanding of corrosion protection applications to pipelines
- 3. Principles of cathodic protection
 - 3.1. Corrosion principles
 - 3.2. Galvanic interactions and effects
 - 3.3. Potential measurements
 - 3.4. Pourbaix diagrams
 - 3.5. Evans diagrams
- 4. Pipeline coating types and characteristics
 - 4.1. Coating selection considerations
 - 4.2. Coating failures
 - 4.3. Coating types
- 5. Soil conditions and electrical interaction
 - 5.1. Soil resistivity measurement
- 6. Potential measurement methods and criteria
 - 6.1. Potential surveys
 - 6.2. Protection criteria
- 7. Design of pipeline cathodic protection systems
 - 7.1. Impressed current cathodic protection systems
 - 7.2. Sacrificial cathodic protection systems
- 8. Cathodic protection equipment
- 9. Stray currents and interference
- 10. Overcathodic protection
- 11. Stress corrosion cracking protection
- 12. Economics of CP systems

Index **429**

About EOLSS **437**

VOLUME III

The Petroleum Upstream Industry: Hydrocarbons Exploration and Production **1**
 P. Macini and E. Mesini, *Department of Civil, Environmental and Materials Engineering, University of Bologna, 40131 Italy*

- 1. Oil and Gas Reserves
 - 1.1. Origin and Migration of Petroleum Fluids
 - 1.2. Geological Traps
 - 1.3. Reservoir Rock
 - 1.4. Phase Behavior and Reservoir Distribution of Petroleum Fluids
- 2. Oil Well Drilling Engineering and Formation Evaluation
 - 2.1. Well Classification
 - 2.2. Oil Well Drilling Techniques
 - 2.3. Well Logging
 - 2.4. Well Testing

3. Reservoir Engineering
 - 3.1. Estimation of Oil and Gas Volumes
 - 3.2. Reservoir Drive Mechanisms
 - 3.3. Reservoir Fluids Displacement
 - 3.4. Numerical Models of Hydrocarbon Reservoirs
 - 3.5. Enhanced and Assisted Oil Recovery Processes
4. Production Engineering
 - 4.1. Well Completion
 - 4.2. Artificial Lift
 - 4.3. Surface Treatment of Natural Gas
 - 4.4. Surface Treatment of Crude Oil
5. Unconventional Hydrocarbons
 - 5.1. Unconventional Oil
 - 5.2. Unconventional Gas
 - 5.3. Methane Hydrates
6. Conclusions

Geophysical Prospecting: Dynamic Reservoir Characterization and Time-Lapse Multicomponent Seismology for Reservoir Monitoring 77

Steven L. Roche, *CGGVeritas, Multicomponent Processing & Technology Group, USA.*
 Thomas L. Davis, *Colorado School of Mines, Department of Geophysics, USA.*

1. Multicomponent Seismology – Part I
 - 1.1. Rock Physics / Reservoir Processes
2. Multicomponent Seismology - Part II
3. Integration
 - 3.1. Multicomponent Seismic Data Acquisition
 - 3.2. Multicomponent Seismic Data Processing
 - 3.3. Integration with Well Control and Reservoir Production
4. Key Results – Dynamic Reservoir Characterization
 - 4.1. Vacuum Field
 - 4.2. Weyburn Field
 - 4.3. Rulison Field
5. Conclusions

Petroleum Geochemistry 111

Giovanni Martinelli, *ARPA, Environmental Protection Agency of the Emilia Romagna Region, Reggio Emilia, Italy.*

1. Introduction
2. Geochemical Analytical Techniques Utilized in Petroleum Geochemistry
3. Oil Composition and Origin
4. Insoluble Organic Material - Kerogen
5. Soluble Organic Material
6. Source Rocks and Depositional Environment
7. Maturity Indexes and Biodegradation Processes
8. Age of Oil and Migration Processes
9. Geochemistry of the Reservoir
10. Modeling of the History of Reservoir
11. Metals in Petroleum
12. Oilfield Waters
13. Selected data on Inorganic Geochemistry of Petroleum and of Oilfield Waters
14. Stable Isotopes
15. Noble Gases Geochemistry
16. Natural Gas
17. Hydrocarbon Generation from Coal
18. Inorganic Hydrocarbon Generation
19. Surface Prospecting

Petrophysics and Reservoir Characteristics

134

P. Macini and E. Mesini, *Department of Chemical, Petroleum, Mining and Environmental Engineering, University of Bologna, 40131 Italy*

1. Laboratory Samples Preparation
2. Fluid Saturation
 - 2.1. Laboratory Measurements
 - 2.2. Indirect measurements
3. Wettability
 - 3.1. Laboratory Measurements
4. Interfacial Tension
5. Capillary Pressure
6. Fluids Distribution in the Reservoir
7. Porosity
 - 7.1. Laboratory Measurements
 - 7.2. Indirect Measurement
8. Permeability
 - 8.1. Effective and Relative Permeability
 - 8.2. Laboratory Measurements
 - 8.3. Indirect Measurements

The Role of Well Logging in Formation Evaluation

177

Zaki Bassiouni, *Department of Petroleum Engineering, Louisiana State University, Baton Rouge, Louisiana, USA*

1. Introduction
2. Concepts of Open Hole Logs

Drilling Engineering

188

P. Macini, *Department of Civil, Environmental and Materials Engineering, University of Bologna, 40131 Italy*

1. Introduction
2. Drilling rig
 - 2.1. Hoisting System
 - 2.2. Rotation System
 - 2.3. Circulation System
 - 2.4. Power Generation and Distribution System
3. Drilling Fluids
 - 3.1. Water-Base Drilling Fluids
 - 3.2. Non-Water-Base Drilling Fluids
 - 3.3. Gaseous Drilling Fluids
4. Drill string
 - 4.1. Drill String Accessories
 - 4.2. Downhole Mud Motors
5. Drill bits
 - 5.1. Roller Bits
 - 5.2. Fixed Cutters Bits
6. Casing and Cementing Operations
7. Wellhead and Safety Systems
 - 7.1. Wellhead
 - 7.2. Safety Equipment
8. Drilling Problems
 - 8.1. Well Control
 - 8.2. Hole Problems
 - 8.3. Fishing Operations

Horizontal and Multilateral Well Technology **254**
 Sada Joshi, *Joshi Technologies International, Inc., Tulsa, Oklahoma, USA.*

1. Introduction
 - 1.1. Field Development Plans
 - 1.2. Application
 - 1.3. Reasons for Drilling Horizontal Wells and Productivity Improvement
 - 1.4. Enhancement of Reserves
 - 1.5. Economic Reasons
2. Drilling Methods
3. Completion of Horizontal Wells
 - 3.1. Open Hole Completions
 - 3.2. Slotted Liners
 - 3.3. External Casing Packers (ECP)
 - 3.4. Cemented and Perforated Liners
4. Horizontal Well Productivity
 - 4.1. Steady State Productivity of a Horizontal Gas Well
 - 4.2. Important Parameters for Horizontal Well Productivity
5. Multilateral Wells
 - 5.1. Multilateral Completion Types
 - 5.2. Productivity of Multilateral Wells
6. Horizontal Well Planning

Artificial Lift **301**
 Augusto Podio, *Department of Petroleum and Geosystems Engineering, University of Texas at Austin, Austin, Texas, USA*

1. Introduction
 - 1.1. Inflow Performance Relation
 - 1.2. Vertical Lift Performance
 - 1.3. Artificial Lift Objectives
2. Lift Systems
 - 2.1. Selection Process
 - 2.2. General Characteristics and Operational Parameters of Pumping Systems
 - 2.3. General Characteristics and Operational Requirements of Gas Lift Systems
3. Pumping
 - 3.1. Positive Displacement Pumps
 - 3.2. Dynamic Displacement Pumps
4. Gas Lift
 - 4.1. Continuous Rotating Gas Lift
 - 4.2. Intermittent Gas Lift
5. Plunger Lift

Index **347**

About EOLSS **353**

VOLUME IV

Enhanced Oil Recovery Using Aqueous Phase Chemicals, Miscible Gas Injection, and Thermal Means **1**
 A. R. Kavscek, *Stanford University, Energy Resources Engineering, Stanford, CA 94305-2220 U.S.A.*

1. Introduction
2. Oil Recovery
3. Mobility Alteration and EOR
 - 3.1. Thermal Oil Recovery

- 3.2. Miscible Gas Injection
- 3.3. Chemical Flooding
- 3.4. Hybrid Processes
- 4. Example EOR Field Projects

Mathematical Modeling of Petroleum Extraction Processes

20

Y. Cheng, *Department of Petroleum & Natural Gas Engineering, West Virginia University, USA*

- 1. Introduction
- 2. Mathematical model of single-phase flow – slightly compressible fluids (liquid)
 - 2.1. Derivation of the diffusivity equation
 - 2.2. Analytical solution to the diffusivity equation for slightly compressible fluid
- 3. Mathematical model of single-phase flow –compressible fluid (gas)
 - 3.1. Derivation of the diffusivity equation
 - 3.2. Analytical solution to the diffusivity equation for compressible fluids
- 4. Mathematical model of oil-water two phase flow
 - 4.1. Derivation of the diffusivity equation
 - 4.2. 1D linear oil-water two phase flow – Buckley-Leverett model
- 5. Mathematical model of oil-gas two phase flow
 - 5.1. Derivation of the diffusivity equation
 - 5.2. Solution to the diffusivity equation for oil-gas two phase flow
- 6. Mathematical Model of Multiphase Flow
 - 6.1. Derivation of the diffusivity equation
 - 6.2. Solution to the diffusivity equation for three phase flow

Reservoir Simulation

68

Y. Cheng, *Department of Petroleum & Natural Gas Engineering West Virginia University, USA*

- 1. Introduction to Reservoir Simulation
- 2. Finite Difference Model for Single-phase Slightly Compressible Fluid
 - 2.1. Discretization
 - 2.2. One-dimensional finite difference
 - 2.3. Solution of one-dimensional finite difference equation
 - 2.4. Stability of solution
 - 2.5. Extension of solution to two dimensions and three dimensions
- 3. Finite Difference Model for Single-phase Compressible Fluid
 - 3.1. Nonuniform gridding system
 - 3.2. Solution of one-dimensional finite difference equation
 - 3.3. Transmissibility coefficient between gridblocks
 - 3.4. Initial condition
 - 3.5. Boundary conditions
 - 3.6. Extension of solution to two dimensions and three dimensions
- 4. Finite Difference Model for Multiphase Flow
 - 4.1. Capillary pressure and relative permeability
 - 4.2. Basic equations for one-dimensional problems
 - 4.3. IMPES method
 - 4.4. Transmissibility of gridblocks
 - 4.5. Production term
 - 4.6. Extension of solution to two dimensions and three dimensions

Offshore Drilling and Production

98

J.C. Delgado, J.J. Schubert and C. Teodoriu*, *Department of Petroleum Engineering, Texas A&M University, USA. * Also Institute of Petroleum Engineering of TU Clausthal, Germany*

- 1. Introduction
- 2. Offshore Development Systems
 - 2.1. Fixed Systems

- 2.2. Floating Systems
- 2.3. Subsea Systems
- 3. Offshore Production
 - 3.1. Topsides
 - 3.2. Fluid Processing and Treatment
 - 3.3. Subsea Processing
 - 3.4. Flow Assurance
 - 3.5. Early Production Systems (EPS)
- 4. Offshore Drilling and Completion
 - 4.1. Drilling the Well
 - 4.2. Well Control
 - 4.3. Problems associated with Deepwater Drilling
 - 4.4. Completing the Well
- 5. Well Intervention
- 6. Summary and Conclusions

Petroleum Economics

139

A. Clò, *Dept. of Economic Sciences, University of Bologna, Italy*
 L. Orlandi, *RIE Srl, Energetic and Industrial Research, Bologna, Italy.*

- 1. Basic Conditions for Petroleum Economics
 - 1.1. High Capital Intensity and Risk Factor
 - 1.2. Level and Structure of Oil Production Costs
 - 1.3. Economies of Scale, Interdependences, Specificity
 - 1.4. The “Time Factor”
 - 1.5. The Demand Function
- 2. Market Structure and Price Dynamics in Twentieth Century
 - 2.1. From the Pioneers to the American Oil Industry: 1859-1900
 - 2.2. From American to International Industry: 1900-1940
 - 2.3. Concentration and Coordination: 1940-1970
 - 2.4. Inertial Stability and Evolutionary Processes
 - 2.5. Towards a New Equilibrium
- 3. The New Oil Era: An Unprecedented Price Escalation
 - 3.1. Structural Determinants
 - 3.2. The Financial Determinants
 - 3.3. World Recession in the Second Half of 2008: Back on Fundamentals
 - 3.4. OPEC Policies and the Risks of Cheap Oil

Environmental Aspects of Oil and Gas Production

190

J. O. Robertson, *Earth Engineering, 3708 La Canada Road, Fallbrook, CA 92028, USA*
 G. V. Chilingar, *Department of Civil and Environmental Engineering, University of Southern California, Los Angeles, USA*
 L. F. Khilyuk, *Russian Academy of Natural Science, U.S.A. Branch, USA*
 B. Endres, *101 S. Windsor Blvd., Los Angeles, CA 90004, USA*

- 1. Subsidence associated with fluid (gas, oil and water) production
 - 1.1. Mechanics of subsidence
 - 1.2. Models of subsidence
 - 1.3. Measurement of subsidence
 - 1.4. Rate of subsidence
 - 1.5. Stress and strain distribution in subsiding formations
 - 1.6. Surface fissures caused by subsidence
- 2. Migration of gas through porous media
 - 2.1. Migration of gas
 - 2.2. Discontinuous-phase migration of gas
 - 2.3. Continuous-phase gas migration
 - 2.4. Paths of gas migration
 - 2.5. Sources of free gas available for migration

- 2.6. Environmental hazards of gas migration
- 2.7. Gas storage hazards
- 2.8. Surface gas leakage
- 2.9. Mitigation systems
- 2.10. Relationship between seismic activity and production
- 2.11. Production-induced seismic activity
- 3. Hazards of toxics in migrating gas
 - 3.1. BTEX Environmental hazards
 - 3.2. Hydrogen sulfide environmental hazards
- 4. Conclusions

Hydrogeology of Petroleum Engineering

233

Hillel Rubin, *Faculty of Civil and Environmental Engineering, Technion – Israel Institute of Technology, Haifa 32000, Israel*

- 1. General Introduction
- 2. Single Fluid Phase Hydrogeology
 - 2.1. Groundwater Flow
 - 2.2. Transport of Dissolved Contaminants in Groundwater
- 3. Environmental and Human Health Aspects
 - 3.1. Introduction
 - 3.2. Classification and Risks of Petroleum Products
- 4. Hydrogeological Characteristics of Multiphase Fluids
 - 4.1. Contamination of Soils and Aquifers
 - 4.2. Remediation of Soils and Aquifers
 - 4.3. Barriers
- 5. Quantifying Petroleum Hydrogeological Characteristics
 - 5.1. Basic Formulas
 - 5.2. Numerical Modeling
 - 5.3. Approximate Evaluation Methods
- 6. Concluding Remarks

History of Petroleum and Petroleum Engineering

285

P. Macini and E. Mesini, *Department of Chemical, Petroleum, Mining and Environmental Engineering, University of Bologna, Italy*

- 1. The pre-industrial period: from antiquity to Drake's well
- 2. From Drake's well to the 1920s
- 3. Well construction technology from antiquity to early 1900
- 4. Captain Lucas and the discovery of the new Century
- 5. The birth of petroleum engineering and petroleum geology
- 6. The systematic development from the 1920s to the end of World War II
 - 6.1. Oilwell Engineering
 - 6.2. Reservoir Engineering
 - 6.3. Exploration and Geophysics
- 7. Petroleum Engineering after World War II
 - 7.1. Oilwell Engineering
 - 7.2. Offshore Technology
 - 7.3. Reservoir Engineering and Geophysics

Hydrates of Natural Gas

327

Yuri F. Makogon, *Texas A&M University, College Station, USA*

- 1. Introduction
 - 1.1. A Brief History of the Discovery of Natural Gas Hydrates
 - 1.2. Characteristics and Morphology of Gas Hydrates
- 2. Natural Gas Hydrates – Hydrates Formed in Nature without Engineering
 - 2.1. The Location of Gas Hydrate Zones

- 2.2. Characteristic of Gas Hydrate Deposits (GHD)
- 2.3. Composition of Natural Gas Hydrates
- 3. Methods to Develop Gas Hydrate Deposits
 - 3.1. General Characteristic of the Messoyakha Gas Hydrate Field
- 4. Conclusions

Index **351**

About EOLSS **359**

VOLUME V

Fluid Mechanics and Multiphase Flow in Pipelines **1**

Antonio C. Bannwart, *State University of Campinas, Brazil*

- 1. Introduction
- 2. Mathematical Tools
 - 2.1. Displacement Speed of a Surface
 - 2.2. Leibniz Rule
 - 2.3. Gauss-Green Theorems
 - 2.4. Transport Rates
- 3. Single-Phase Flow
 - 3.1. Integral Instant Balance Equations
 - 3.2. Local Instant Balance Equations and Constitutive Relations
 - 3.3. One-Dimensional Channel Flow Equations and Constitutive Relations
- 4. Two-Phase and Multiphase Flow
 - 4.1. Integral Instant Balance Equations
 - 4.2. Local Instant Balance Equations and Jump Conditions
 - 4.3. One-Dimensional Channel Flow Equations
 - 4.4. Introduction to Multiphase Flow Modeling
- 5. Conclusion

Phase Behavior in Petroleum Fluids: A Detailed Descriptive and Illustrative Account with Emphases on Heavy Organics **44**

G. Ali Mansoori, *Departments of BioEngineering, Chemical Engineering & Physics, University of Illinois at Chicago, Chicago, IL 60607-7052 USA*

- 1. Introduction
 - 1.1. Naturally Occurring Petroleum Fluids
- 2. Components of Petroleum Fluids
 - 2.1. Impurities in Petroleum Fluids
 - 2.2. Heavy Fractions in Petroleum Fluids
- 3. Phase Behaviors in Petroleum Fluids
 - 3.1. Temperature Effect on Petroleum Fluids Phase Separation:
 - 3.2. Pressure Effect on Petroleum Fluids Phase Separation:
 - 3.3. Theory of Phase-Transitions
 - 3.4. Phase-Transition Points
- 4. Discussion

Surface Petroleum Operations **74**

H. K. Abdel-Aal, *National Research Center, Cairo, Egypt*

- 1. Introduction
- 2. Gas-Oil Separation
 - 2.1. Background
 - 2.2. Mechanism of Separation
 - 2.3. Functional Components of a Gas-oil Separator and Control Devices

- 2.4. Methods and Equipment used in Separation
- 2.5. Design Equations for Sizing Gas-Oil Separators
- 3. Emulsion Treatment and Dehydration of Crude Oil
 - 3.1. Fundamentals
 - 3.2. Forms of Water Associated with Produced Oil: Emulsion Formation
 - 3.3. Treating the Emulsions
- 4. Desalting of Crude Oil
 - 4.1. Background
 - 4.2. Description of Desalting Process
- 5. Stabilization and Sweetening of Sour Crude Oil
 - 5.1. Introduction
 - 5.2. Process Description
- 6. Conclusions

Natural Gas Storage Engineering

95

Kashy Aminian and Shahab D. Mohaghegh, *Petroleum & Natural Gas Engineering, West Virginia University, Morgantown, WV, USA.*

- 1. Introduction
- 2. Inventory
- 3. Deliverability
- 4. Containment
- 5. Inventory Analysis
 - 5.1. Volumetric Method
 - 5.2. Pressure-Content Method
 - 5.3. Inventory per Pound Method

Gases to Liquids (GTL)

109

H. K. Abdel-Aal, *NRC, Cairo, Egypt*

- 1. Introduction
- 2. Exploitation of Remote Reserves of Natural Gas
 - 2.1. Overview
 - 2.2. Available Technological Options
- 3. GTL Technology
 - 3.1. Thermodynamic Background
 - 3.2. GTL Concept: Overall Assessment
- 4. GTL Using Fisher Tropsch Process
 - 4.1. Introduction
 - 4.2. Generation of Synthesis Gas
 - 4.3. Chemical Reactions and Process Design
 - 4.4. Reactors and Other Equipment
 - 4.5. Operating Data for F-T Reactors
 - 4.6. Hydro-Processing
- 5. Trends of Developments in GTL Technology
 - 5.1. Syngas Manufacturing Technology
 - 5.2. Fisher Tropsch Technology
- 6. Commercial Applications
- 7. Up-Grading of Heavy Crude Oils Using GTL
- 8. Benefits of GTL to the Environment
- 9. Conclusions

Natural Gas Processing

130

H. K. Abdel-Aal, *National Research Center (NRC), Cairo, Egypt*

- 1. Introduction
- 2. Description of a natural gas processing system: an overview

3. Sweetening of sour natural gas
 - 3.1. Overview and Methods Used
 - 3.2. Chemi-sorption Sweetening Processes (Amines)
 - 3.3. Physical Methods
 - 3.4. Other Methods
 - 3.5. Conversion of H₂S Gas to Elementary Sulfur(Claus Process)
4. Gas Dehydration
 - 4.1. Fundamentals
 - 4.2. Predictions of Conditions Leading to Hydrate Formation
 - 4.3. Dehydration Processes using Liquids (by Absorption)
 - 4.4. Dehydration Processes using Solid Desiccants (by Adsorption)
 - 4.5. Dehydration by Condensation (Cooling)
 - 4.6. Chemicals for Hydrates Inhibition
 - 4.7. Comparison of Dehydration Methods
5. Recovery and Extraction of NGL
 - 5.1. Introduction
 - 5.2. The Cryogenic Expansion Process
 - 5.3. The Absorption Process
6. Natural Gas Liquid (NGL) Fractionation
7. Conclusions

Automotive Fossil Fuels: Characteristics, Evolution and Environmental Constraints	153
<i>Leandro Henrique Benvenuti, Ford Motor Company Brasil, Ltda</i>	

1. Introduction to Fuels
2. Introduction to Petroleum Based Fuels
 - 2.1. Environmental Constraints of Petroleum Based Fuels
3. Diesel Fuel
 - 3.1. Diesel Fuel Components
 - 3.2. Diesel Fuel Properties
4. Gasoline
 - 4.1. Gasoline Development
 - 4.2. Gasoline Properties
5. Natural Gas and Liquefied Petroleum Gas
 - 5.1. Natural Gas
 - 5.2. Liquefied Petroleum Gas

Petrochemicals	179
<i>William L Leffler, Venus Consulting, Houston, Texas, USA</i>	

1. Introduction
 - 1.1. Industry Structure
 - 1.2. Manufacturing Facilities
 - 1.3. The Chemistry of Petrochemicals
2. Base Chemicals
 - 2.1. Olefins plants
 - 2.2. Ethylene
 - 2.3. Propylene
3. Aromatics, benzene, toluene, and xylenes
 - 3.1. Benzene
 - 3.2. Toluene
 - 3.3. Xylenes
4. Butylenes and butadiene
 - 4.1 Butadiene
5. Cyclohexane
 - 5.1. Manufacturing
 - 5.2. Commercial Aspects
6. Cumene, Phenol, and Acetone

- 6.1. Cumene
- 6.2 Phenol and Acetone Manufacture
- 6.3 Commercial Aspects
- 7. Ethylbenzene and styrene
 - 7.1. Ethylbenzene
 - 7.2. Styrene
- 8. Ethylene dichloride and vinyl chloride
 - 8.1. Manufacturing Process
 - 8.2. Commercial Aspects
- 9. Ethylene oxide and ethylene glycol
 - 9.1 Manufacturing processes
 - 9.2 Commercial Aspects
- 10. Propylene oxide and propylene glycol
 - 10.1. Manufacturing Processes
 - 10.2. Commercial Aspects
- 11. Synthesis gas
 - 11.1. Manufacturing Process
- 12. Alcohols
 - 12.1 Methanol
 - 12.2. Ethyl Alcohol
 - 12.3 Isopropyl Alcohol
 - 12.4 Normal Butyl Alcohol
 - 12.5 Secondary and Tertiary Butyl Alcohols
 - 12.6 1,4-Butandiol
- 13. Aldehydes
 - 13.1 Formaldehyde
 - 13.2. Acetaldehyde
- 14. Ketones
 - 14.1. Acetone
 - 14.2. Methyl Ethyl Ketone
 - 14.3. Methyl Isobutyl Ketone
- 15. Acids
 - 15.1. Acetic Acid
 - 15.2. Adipic Acid
 - 15.3. Phthalic acids
- 16. Acrylonitrile, acrylic acid, and acrylates
 - 16.1. Acrylonitrile
 - 16.2. Acrylic Acid and Acrylates
 - 16.3. Methacrylates
- 17. Maleic anhydride
 - 17.1. Manufacturing
 - 17.2. Commercial Aspects
- 18. Alpha olefins
 - 18.1. Manufacturing
 - 18.2. Commercial Aspects
- 19. Polymers
 - 19.1. Manufacturing
 - 19.2. Commercial Aspects
 - 19.3. Fibers and Foam

Environmental Impacts of the Oil Industry

226

Jacqueline Barboza Mariano, *Energy Specialist at National Petroleum Agency of Brazil*

Emilio Lèbre La Rovere, *Professor at Energy Planning Program, Federal University of Rio de Janeiro, Brazil*

- 1. Introduction
- 2. Oil and Gas Production Activities and Environmental Issues
- 3. Petroleum Refining Activities and Environmental Issues

- 3.1. Air Emissions
- 3.2. Water Effluents
- 3.3. Solid Wastes
- 4. Environmental Risks of the Oil Industry
- 5. Conclusions and Recommendations

A Modern Survey of World Oil: Realities and Delusions **260**
 Ferdinand E. Banks, *Department of Economics, Uppsala University, Sweden*

- 1. Introduction
- 2. The bottom line in the peaking dispute
- 3. Remembering the oil price future
- 4. Economic Theory and OPEC
- 5. Some OPEC development economics
- 6. Long and short term concerns and speculation
- 7. Final remarks and conclusions

About EOLSS **301**

VOLUME VI

Analytical Methods and Techniques Applied To Crude Oil and Petroleum Products **1**
 James G. Speight, *2476 Overland Road, Laramie, WY 82070-4808, USA*

- 1. Petroleum Analysis
 - 1.1. Introduction
 - 1.2. History
 - 1.3. Analysis and Specifications
 - 1.4. Sampling
 - 1.5. Measurement
 - 1.6. Accuracy
 - 1.7. Precision
 - 1.8. Method Validation
- 2. Chemical Composition
 - 2.1. Elemental (Ultimate) Composition
 - 2.2. Chemical Composition
- 3. Classification
 - 3.1. Classification Systems
- 4. Physical Properties
 - 4.1. Elemental (Ultimate) Analysis
 - 4.2. Metals Content
 - 4.3. Density, Specific Gravity, and API gravity
 - 4.4. Viscosity
- 5. Thermal Properties
 - 5.1. Volatility
 - 5.2. Liquefaction and Solidification
 - 5.3. Carbon Residue
 - 5.4. Aniline Point
 - 5.5. Specific Heat
 - 5.6. Heat Content (Enthalpy)
 - 5.7. Pressure-Volume-Temperature Relationships
 - 5.8. Heat of Combustion
 - 5.9. Critical Properties
- 6. Electrical and Optical Properties

- 6.1. Electrical Conductivity
- 6.2. Dielectric Constant
- 6.3. Dielectric Strength
- 6.4. Dielectric Loss and Power Factor
- 6.5. Color
- 6.6. Refractive Index
- 6.7. Optical Activity
- 7. Spectroscopic Properties
 - 7.1. Infrared Spectroscopy
 - 7.2. Nuclear Magnetic Resonance
 - 7.3. Mass Spectrometry
 - 7.4. Ultraviolet Spectroscopy
 - 7.5. X-Ray Diffraction
- 8. Functional Group Analysis
- 9. Fractional Composition
 - 9.1. Distillation
 - 9.2. Atmospheric Pressure
 - 9.3. Reduced Pressure
- 10. Solvent Treatment
 - 10.1. Asphaltene Separation
 - 10.2. Fractionation
- 11. Chromatographic Analysis

 - 11.3. Adsorption Chromatography
 - 11.4. Gel Permeation Chromatography
 - 11.5. Ion-Exchange Chromatography
 - 11.6. High-Performance Liquid Chromatography
 - 11.7. Supercritical Fluid Chromatography
 - 11.8. Thin Layer Chromatography
- 12. Structural Group Analysis
 - 12.1. Physical Property Methods
 - 12.2. Spectroscopic Methods
 - 12.3. Methods for Heteroatom Systems
- 13. Molecular Weight
 - 13.1. Vapor Pressure Osmometry
 - 13.2. Freezing Point Depression
 - 13.3. Boiling Point Elevation
 - 13.4. Size Exclusion Chromatography
 - 13.5. Mass Spectrometry
 - 13.6. Nuclear Magnetic Resonance Spectroscopy
- 14. Petroleum Product Analysis
 - 14.1. Natural Gas, Liquefied Petroleum Gas, and Refinery Gas
 - 14.2. Naphtha
 - 14.3. Gasoline
 - 14.4. Kerosene
 - 14.5. Diesel Fuel
 - 14.6. Distillate Fuel Oil
 - 14.7. Residual Fuel Oil
 - 14.8. Lubricating Oil
 - 14.9. Grease
 - 14.10. Wax
 - 14.11. Asphalt
 - 14.12. Coke
- 15. Use of the Data

Relation Between Biofuels Versus Fossil Fuels **269**

Luís Cortez, *Faculty of Agricultural Engineering – FEAGRI, State University of Campinas – UNICAMP, Brazil.*

Rogério Cezar de Cerqueira Leite, *Interdisciplinary Center for Energy Planning – NIPE, State University of Campinas – UNICAMP, Brazil*

1. Introduction
2. Increase of the Greenhouse Effect and Atmospheric Temperature
3. History of the Technology and the Use of Biofuels
4. Possible Alternatives to Mitigate Carbon Dioxide Emissions
5. Photosynthesis and Biofuels
6. Productive Cycle of Biofuels
7. Production of Ethanol
 - 7.1. Production of Ethanol from Sugarcane
 - 7.2. Production of Ethanol from Corn
8. Second Generation of Ethanol: Hydrolysis and Fischer-Tropsch Technologies
 - 8.1. Hydrolysis
 - 8.2. Fischer Tropsch Process
9. Production of Biodiesel
 - 9.1. Raw Material
 - 9.2. Comparison of Biodiesel with Diesel Oil
 - 9.3. Process of Industrial Production of Biodiesel
10. Bio-oil Production by Pyrolysis
11. Points to Consider on Biofuels Production
 - 11.1. Sustainability Aspects
 - 11.2. Competition between Biofuels and Food Production
 - 11.3. Producing Biofuels While Preserving Fragile Ecosystems
 - 11.4. Producing Biofuels While Creating Jobs
12. Final Considerations on the Production and Use of Biofuels
13. Fossil fuels versus Biofuels
14. Conclusion

Future Technology in Heavy Oil Processing **304**

Jorge Ancheyta and Mohan S. Rana, *Instituto Mexicano del Petróleo, Eje Central Lázaro Cárdenas Norte 152, Mexico City, Mexico*

1. Introduction
 - 1.1 The problem of processing heavy petroleum
 - 1.2. Properties of Heavy Petroleum
 - 1.3 General Classification of Processes for Upgrading Heavy Petroleum
2. Description of Processes for Upgrading of Heavy Petroleum
 - 2.1. Technologies Based on Carbon Rejection
 - 2.2. Technologies Based on Hydrogen Addition
 - 2.3. Emerging Technologies
3. Comparison of Technologies
4. Concluding Remarks
