CONTENTS

Preface

vi

The Science of Complex Networks **1**

Guido Caldarelli, *Centro SMC CNR-INFM, Dipartimento di Fisica, University of Rome "Sapienza", Piazzale Aldo Moro 5 00185 Rome, Italy*

1. Introduction
2. The Properties of Complex Networks
 - 2.1. The Small-World Effect
 - 2.2. The Scale-Free Degree Distribution
 - 2.3. Clustering
 - 2.4. Centrality and Betweenness
 - 2.5. Correlations between the Vertices
 - 2.6. Rich-Club Coefficient
3. Models of Networks
 - 3.1. Random Graphs
 - 3.2. Small-World Model
 - 3.3. Barabási-Albert Model
 - 3.4. Fitness Model
4. Social Networks and Epidemics
5. Technological Networks
 - 5.1. Internet
 - 5.2. The World Wide Web (WWW)
 - 5.3. Wikipedia
6. Biological Networks
 - 6.1. Networks of Food Chains
 - 6.2. Protein Interaction Networks
 - 6.3. Metabolic Networks
7. Financial and Economic Networks
 - 7.1. The Network of Boards of Directors
 - 7.2. Network of Partnership Shares
 - 7.3. Networks Correlation in Prices
 - 7.4. Networks of Interbank Credit

Networks in Cell Biology **26**

R. Albert, *Departments of Physics and Biology, Pennsylvania State University, USA*

1. Introduction
2. Inference of interaction networks from expression information
3. Network analysis
4. Dynamic modeling
5. Conclusions

Diseasome and Genetic Networks **41**

Kwang-Il Goh, *Department of Physics, Korea University, Seoul 136-713, Korea*

1. Introduction
2. The human diseasome
 - 2.1. Bipartite Graph Representation of the Diseasome
 - 2.2. Network Properties
 - 2.3. Disease Module Hypothesis
3. Characterizing human genes from the disease network perspective
 - 3.1. Centrality-Essentiality Relations of Human Genes
 - 3.2. Peripheral Nature of Human Disease Genes and Evolutionary Explanation
4. Further applications of the diseasome
 - 4.1. Prediction of Disease Genes

- 4.2. Drug-Target Network
- 4.3. Putting More Layers in the Diseaseome
- 5. Conclusion

An Introduction to The World Wide Web

59

Debora Donato, *Yahoo! Labs, Sunnyvale, California, USA*

- 1. Introduction
- 2. Microscopic properties
 - 2.1 Power Law Distribution and Scale-Free Networks
 - 2.2 Degree Distribution
- 3. Link Analysis Ranking Algorithms
 - 3.1. PageRank
 - 3.2. Hits
- 4. Macroscopic properties
- 5. The fine-grained structure of the Web graph
- 6. Dynamic characterization of the Web graph
 - 6.1. The Evolution of the Host-Graph
 - 6.2. Clustering Evolution Patterns
 - 6.3. Correlation among Neighbors

Knowledge Networks: The Case Of Wikipedia

79

Vinko Zlatić, *Centro SMC CNR-INFM, Dipartimento di Fisica, University of Rome "Sapienza", Piazzale Aldo Moro 5 00185 Rome, Italy*

Theoretical Physics Division, Rudjer Boskovic Institute, P.O.Box 180, HR-10002 Zagreb, Croatia

- 1. Introduction
- 2. Expert Networks
 - 2.1. Citation Networks
 - 2.2. Networks of Citations between Scientific Papers
 - 2.3. Semantic Networks
- 3. The WWW and Internet as Knowledge Network
- 4. Wikipedia Analyses
 - 4.1 Building of Wikipedia Graphs and Ensembles
 - 4.2 Data, Methodology and Filtering
 - 4.3. Wikipedia Growth, Small World Effect, Topology and Other Properties
- 5. Subgraphs of Wikipedia
 - 5.1. Discussion of Presented Statistical Analysis
 - 5.2. Influence of Reciprocal Edges on the Structure of Wikipedia

The World Trade Web: Structure, Evolution And Modeling

107

M. Ángeles Serrano, *Departament de Química Física, Universitat de Barcelona, Martí I Franquès 1, 08028 Barcelona, Spain*

Diego Garlaschelli, *Dipartimento di Fisica, Università di Siena, Via Roma 56, 53100 Siena, Italy*

Marián Boguñá, *Departament de Física Fonamental, Universitat de Barcelona, Martí i Franquès 1, 08028 Barcelona, Spain*

Maria I. Loffredo, *Dipartimento di Scienze Matematiche ed Informatiche, Università di Siena, Pian dei Mantellini 44, 53100 Siena, Italy*

- 1. Introduction
- 2. The undirected network approach
 - 2.1. Topological Features
 - 2.1.1. Number of Countries in the World Trade System
 - 2.1.2. Network Reconstruction
 - 2.1.3. Unweighted Topology
 - 2.2. Weighted Structure
- 3. Directed representations

- 3.1. Directedness and Reciprocity
- 3.2. Time Invariance of the Distribution of Bilateral Trade Imbalances
- 3.3. Network of Bilateral Trade Imbalances
 - 3.3.1. The Backbone of the WTW
 - 3.3.2. Diffusion on the WTW and the Dollar Experiment
- 4. Modeling the World Trade Web
 - 4.1. Gravity Models
 - 4.2. Network Models
 - 4.2.1. Hidden Variable Model
 - 4.2.2. Maximum Likelihood Approach
 - 4.2.3. Directed Models
- 5. Conclusions and some open questions

River Networks

155

Achille Giacometti, *Dip. Chimica Fisica Università Ca' Foscari Venezia Calle Larga S. Marta DD. 2137 I-30123 Venezia, Italy*

- 1. Introduction
- 2. Drainage Basins, River Networks and Digital Elevation Map
- 3. Scale Invariance and Fractals
 - 3.1. Critical Phenomena, Scaling Relations and Universality
 - 3.2. Complex Systems
- 4. Simple (but relevant) Models for River Networks
 - 4.1. Scheidegger Model
 - 4.2. Optimal Channel Networks
 - 4.3. Self-Organized Critical Models
 - 4.4. Astrophysical Applications
- 5. Relation with Interface Dynamics
- 6. Allometric Relations
- 7. Self-similar versus self-affine river basins
- 8. Conclusions

Modeling Transportation Networks via Principles of Optimality

181

Marc Barthelemy, *Institut de Physique Theorique, CEA, IPhT and CNRS, F-91191 Gif-sur-Yvette, France and Ecole des Hautes Etudes en Sciences Sociales, Centre d'Analyse et de Mathematique Sociales, 54 boulevard Raspail, F75270 Paris Cedex 06 France*
 Alessandro Flammini, *School of Informatics and Biocomplexity Center, Indiana University, 919 East Tenth Street, Bloomington IN 47406, USA*

- 1. Introduction: Transportation Networks and General Properties of Spatial Networks
- 2. Optimal Transportation Network
- 3. A general model of optimal networks
- 4. Local optimization
- 5. Conclusions

Communities in Complex Networks: Identification at Different Levels

197

Alex Arenas, Jordi Duch and Sergi Gómez, *Departament Enginyeria Informàtica i Matemàtiques, Universitat Rovira i Virgili, Spain*
 Leon Danon, *Mathematics Institute, University of Warwick, Great Britain*
 Albert Díaz-Guilera, *Departament Física Fonamental, Universitat de Barcelona, Spain*

- 1. Introduction
- 2. Definition of communities
- 3. Evaluating community identification
- 4. Link removal methods
 - 4.1. Shortest Path Centrality
 - 4.2. Extensions of the Shortest Path Centrality

- 4.3. Information Centrality
- 4.4. Link Clustering
- 5. Agglomerative methods
 - 5.1. Hierarchical Clustering
 - 5.2. L-Shell Method
 - 5.3. K-Clique Method
- 6. Maximizing modularity methods
 - 6.1. Greedy Algorithm
 - 6.2. Extremal Optimization
 - 6.3. Simulated Annealing Methods
 - 6.4. Information Theoretic Approach
- 7. Spectral Analysis methods
 - 7.1. Spectral Bisection
 - 7.2. Multi Dimensional Spectral Analysis
 - 7.3. Constrained Optimization
 - 7.4. Approximate Resistance Networks
- 8. Other methods
 - 8.1. Clustering and Curvature
 - 8.2. Random Walk Based Methods
 - 8.3. Q-Potts Model
- 9. Further structural complexity
 - 9.1. Hierarchical Organization
 - 9.2. Overlap
- 10. Applications: Search and congestion
- 11. Conclusions

Perspectives on Complex Networks

220

Mark Buchanan, *Notre Dame de Courson, France*

Guido Caldarelli, *CNR-INFM, Centre SMC and CNR ISC , Dipartimento di Fisica Università “Sapienza”, Piazzale Aldo Moro 2 00185 Rome, Italy*

- 1. Introduction
- 2. Complex Networks and the “small world” property
- 3. Hubs, fat tails and scale-free network
- 4. Network formation and stability
- 5. Network efficiency and stability
- 6. Hidden costs and risks
- 7. Conclusions

Functional Collectivity of Complex Brain Networks

234

Hector H. Berra, *Facultad de Ciencias Médicas, Universidad Nacional de Rosario, Argentina.*

Pablo Balenzuela, *Consejo Nacional de Investigaciones Científicas y Técnicas (CONICET), Buenos Aires, Argentina. Departamento de Física, Facultad de Ciencias Exactas y Naturales, Universidad de Buenos Aires, Argentina.*

Daniel Fraiman, *Consejo Nacional de Investigaciones Científicas y Técnicas (CONICET), Buenos Aires, Argentina. Departamento de Matemática y Ciencias, Universidad de San Andrés, Buenos Aires, Argentina.*

Dante R. Chialvo, *Facultad de Ciencias Médicas, Universidad Nacional de Rosario, Argentina. Consejo Nacional de Investigaciones Científicas y Técnicas (CONICET), Buenos Aires, Argentina. Department of Physiology, David Geffen School of Medicine, UCLA, Los Angeles, CA., USA*

- 1. Introduction. The brain is a network.
- 2. Extracting brain functional networks from the data
- 3. Brain correlation networks are scale free.
- 4. The origin of the brain networks scale-free property.
 - 4.1. Average Statistical Properties
 - 4.2. Degree Distribution
 - 4.3. Brain Connectivity versus Brain Collectivity

- 5. Implications
 - 5.1. Scale Free Networks Imply Critical Dynamics?
 - 5.2. An Evolutionary Perspective. Why Do We Need A Brain?
- 6. Conclusion

Epidemic Spreading and Complex Networks	254
<i>Alain Barrat, Centre de Physique Théorique (CNRS UMR 6207), Marseille, France; Complex Networks and Systems Group, ISI Foundation, Turin 10133, Italy</i>	
<i>Vittoria Colizza, Computational Epidemiology Lab, ISI Foundation, Turin 10133, Italy</i>	
<i>Alessandro Vespignani, Center of Complex Networks and Systems Research, School of Informatics and Computing, Indiana University, Bloomington, IN, USA; Pervasive Technology Institute, Indiana University, Bloomington, IN, USA; Complex Networks and Systems Group, ISI Foundation, Turin 10133, Italy</i>	

- 1. Introduction
- 2. Epidemic spreading
 - 2.1. Generalities
 - 2.2. Basic Epidemic Modeling: Compartmental Models, the Homogeneous Mixing Assumption and the Epidemic Threshold
 - 2.2.1. Definition of the Compartmental Models
 - 2.2.2. The Epidemic Threshold
 - 2.3. Complex Networks in Epidemiology
- 3. Single Population Level: The Complex Network of Contacts
- 4. Modeling the Global Spread of Epidemics
- 5. Recent Advances
- 6. Final Remarks

Networks in Finance	279
<i>Fabrizio Lillo, Dip. di Fisica e Tecnologie Relative, viale delle Scienze I-90128, Palermo, Italy</i>	
<i>Santa Fe Institute, 1399 Hyde Park Road, Santa Fe, NM 87501, USA</i>	

- 1. Introduction
- 2. Similarity based networks
 - 2.1. Correlation based graphs: Introduction
 - 2.2. Correlation Based Graphs: Methods
 - 2.2.1. Threshold or Relevance Network
 - 2.2.2. Hierarchical Methods
 - 2.2.3. Validation of Correlation Based Networks with Bootstrap Techniques
 - 2.3. Correlation Based Networks Applied To Finance
 - 2.3.1. Stock Returns
 - 2.3.2. Stock Market Indices
 - 2.3.3. Market Volatility
 - 2.3.4. Interest Rates
 - 2.3.5. Hedge Funds
 - 2.3.6. Financial Agent Networks
- 3. Direct interaction networks
 - 3.1. Direct Interaction Networks Applied To Finance
 - 3.1.1. Board of Directors
 - 3.1.2. Ownership Networks
 - 3.3.3. Bank Networks
 - 3.3.4. Credit Networks
- 4. Conclusions
