## CIVIL ENGINEERING

### **Civil Engineering - Volume 1**

**No. of Pages:** 420

**ISBN:** 978-1-905839-73-5 (eBook)

**ISBN:** 978-1-84826-973-6 (Print Volume)

### **Civil Engineering - Volume 2**

**No. of Pages:** 402

**ISBN:** 978-1-905839-74-2 (eBook)

**ISBN:** 978-1-84826-974-3 (Print Volume)

## CONTENTS

### VOLUME I

<b>Civil Engineering</b>	<b>1</b>
<i>Kiyoshi Horikawa, University of Tokyo, Japan and Saitama University, Japan</i>	

1. Introduction
2. Historical Background of Civil Engineering
  - 2.1. Engineering in General
  - 2.2. Civil Engineering as the Oldest Engineering Discipline
3. Functions of Civil Engineering
  - 3.1. Role of Civil Engineering
  - 3.2. The Civil Engineering Profession
  - 3.3. Branches of Civil Engineering
4. Social Development Of Civil Engineering
  - 4.1. Education Systems
  - 4.2. Licensing
  - 4.3. Civil Engineering Societies
5. Prospects for the Twenty-First Century
  - 5.1. Positive and Negative Legacies in the Twentieth Century
  - 5.2. Role of Civil Engineering in the Twenty-First Century
    - 5.2.1. Development of Better Balanced "Hard" and "Soft" Technologies
    - 5.2.2. Establishment of Suitable Maintenance Systems for Existing Structures and Facilities
    - 5.2.3. Efforts to Mitigate Damage Caused by Natural Disasters
    - 5.2.4. Minimization of Human Impacts on Natural Environment
    - 5.2.5. Effective Utilization of Advanced Technologies, such as Information Technology
    - 5.2.6. Global Environmental Problems

<b>Fields within Civil Engineering - Ports and Canals as Waterborne Transport Facilities</b>	<b>23</b>
<i>Yoshimi Goda, Yokohama National University, Japan</i>	

1. Introduction
2. Ports and Canals in the Ancient World
  - 2.1. Irrigation Canals and Rivers for Waterborne Transport
  - 2.2. Port Construction in the Ancient World
3. Ports and Canals in the Seventh to Fifteenth Centuries
  - 3.1. Grand Canal of China
  - 3.2. Early Canals in Europe
  - 3.3. Mediterranean and Hanseatic League Ports
4. Ports and Canals in the Sixteenth to Nineteenth Centuries
  - 4.1. Briare Canal and Midi Canal of France
  - 4.2. Canal Mania Age of England
  - 4.3. Development of Transoceanic Trade Ports
  - 4.4. Erie Canal of America
  - 4.5. Suez Canal
5. Ports and Canals in the Twentieth Century
  - 5.1. Panama Canal
  - 5.2. Port Development for Great Steamships
  - 5.3. Development of Ports for Containerships
6. Towards the Twenty First Century

<b>Transportation Engineering</b>	<b>40</b>
<i>Izumi Okura, Yokohama National University, Japan</i>	
<i>Masao Kuwahara, The University of Tokyo, Japan</i>	

Hirokazu Akahane, *Chiba Institute of Technology, Japan*  
Fumihiko Nakamura, *Yokohama National University, Japan*

1. Introduction
2. Traffic Flow Fundamentals
  - 2.1. Traffic Flow Characteristics and Theory
    - 2.1.1. Time-Space Diagram
    - 2.1.2. Flow-Density-Speed Relationship
    - 2.1.3. Queuing Theory
    - 2.1.4. Kinematic-Wave Theory
    - 2.1.5. Car-Following Theory
    - 2.1.6. Traffic Simulation
  - 2.2. Traffic Capacity
    - 2.2.1. Simple Section
    - 2.2.2. Merging, Diverging, Weaving Sections
    - 2.2.3. Intersections
  - 2.3. Sensing Technology and Surveillance
    - 2.3.1. Sensors
    - 2.3.2. Surveillance
3. Transportation Planning
  - 3.1. Data Collection
    - 3.1.1. OD Surveys and PT Surveys
    - 3.1.2. Advanced Survey Methods
  - 3.2. Demand Prediction
    - 3.2.1. Four-step Prediction Approach
    - 3.2.2. Discrete Choice Analysis
  - 3.3. Transportation Management
    - 3.3.1. District-wide Management
    - 3.3.2. Public Transportation Management
    - 3.3.3. Comprehensive Traffic Management
    - 3.3.4. Transportation System Management to Transportation Demand Management
    - 3.3.5. Advanced Ways for Management
4. Geometric Design of Highways
  - 4.1. Classification of Highways
  - 4.2. Cross-section of Highway
  - 4.3. Alignment of Highway and Sight Distance
    - 4.3.1. Horizontal Alignment
    - 4.3.2. Vertical Alignment
    - 4.3.3. Sight Distance
    - 4.3.4. Three Dimensional Alignment
  - 4.4. Intersections and Interchanges
    - 4.4.1. At-Grade Intersections
    - 4.4.2. Interchanges
5. Traffic Management
  - 5.1. Aims of Traffic Management
  - 5.2. Classification of Measures of Traffic Management
  - 5.3. Measures that Influence Places and Times of Generation of Traffic Demand
  - 5.4. Measures that Influence Transport Mode Choices
  - 5.5. Smoothing of Traffic Flows
6. Safety
  - 6.1. Necessity of Systematic Approaches
  - 6.2. Fundamentals of Accident Analysis in Each Step
    - 6.2.1. Identification of Sites to Be Treated
    - 6.2.2. Diagnosis: Problems, Causes and Possible Solutions
    - 6.2.3. Selection of Measures to be Applied
    - 6.2.4. Evaluation of Measures Applied

1. Introduction
2. Planning System
  - 2.1. Definition of Planning
  - 2.2. Systems Approach to Planning
  - 2.3. Types of Planning
    - 2.3.1. Land Use Planning
    - 2.3.2. Transportation Planning
    - 2.3.3. Environmental Planning
    - 2.3.4. Other Types of Planning
    - 2.3.5. Comprehensive Planning
  - 2.4. Hierarchical Geographic Structure
    - 2.4.1. Planning Area
    - 2.4.2. Relationships between Hierarchical Plans
  - 2.5. Planning Stages
    - 2.5.1. Master Plan
    - 2.5.2. Feasibility Study
    - 2.5.3. Detailed Design
  - 2.6. Planning Process
    - 2.6.1. Flow of Planning Process
    - 2.6.2. Determination of Objectives
    - 2.6.3. Survey and Data Gathering
    - 2.6.4. Data Analysis
    - 2.6.5. Policy-Making
    - 2.6.6. Implementation
    - 2.6.7. Monitoring
3. Urban and Community Systems
  - 3.1. Land-Use, Transportation and the Environment
    - 3.1.1. The City as a System
    - 3.1.2. Interactions between Urban System Elements
  - 3.2. Governmental Agencies
    - 3.2.1. Urban System Elements and the Agencies in Charge
    - 3.2.2. Coordination of Agencies
4. Policy Measures
  - 4.1. Classification of Policy Measures
  - 4.2. Regulation
  - 4.3. Pricing/Taxation
  - 4.4. Operation
  - 4.5. Education/Information
  - 4.6. Investment
  - 4.7. Integration of Policy Measures
5. Analysis and Planning Techniques
  - 5.1. Outline of Analysis Tools
    - 5.1.1. Investigation of the Present Situation
    - 5.1.2. Forecasts
    - 5.1.3. Unit of Analysis
    - 5.1.4. Key Factors for Planning
  - 5.2. Socio-Economic Framework
    - 5.2.1. Population
    - 5.2.2. Economic Framework
  - 5.3. Land Price
    - 5.3.1. Importance of Land Price
    - 5.3.2. Estimation of Land Price
  - 5.4. Urban Models
    - 5.4.1. System of a Urban Model

- 5.4.2. Existing Urban Models and Applications
- 5.5. Decision Support System
- 6. Institutional Set-Up
  - 6.1. Planning Agencies and Practice
  - 6.2. Citizen Participation
- 7. Finance
  - 7.1. Government Finance and Project Evaluation
  - 7.2. Value Capture
  - 7.3. Private Finance

**Wastewater Management Engineering**

86

Tomonori Matsuo, *Toyo University, Japan*

Eiichi Nakamura, *Ministry of Land, Infrastructure and Transport, Japan*

Masahiro Osako, *National Institute for Environmental Studies, Japan*

- 1. Introduction
- 2. Wastewater Management
  - 2.1. Historical Summary of Water Pollution Control
  - 2.2. Collection and Treatment Schemes of Wastewater
  - 2.3. Characterization of Wastewater
    - 2.3.1. Municipal Wastewater
    - 2.3.2. Industrial Wastewater
  - 2.4. Processes for Wastewater Treatment
    - 2.4.1. Screening
    - 2.4.2. Sedimentation
    - 2.4.3. Activated Sludge Processes
    - 2.4.4. Biofilm Processes
    - 2.4.5. Stabilization Ponds and Aerated Lagoons
    - 2.4.6. Disinfection
    - 2.4.7. Advanced Wastewater Treatment
  - 2.5. Processes for Sludge Treatment
    - 2.5.1. Thickening
    - 2.5.2. Digestion
    - 2.5.3. Dewatering
    - 2.5.4. Incineration
    - 2.5.5. Composting
- 3. Solid Wastes Management
  - 3.1. Historical Summary of Wastes Problems
    - 3.1.1. Accumulation of Solid Wastes and Start of Public Health Issues
    - 3.1.2. Conversion of Mass-disposal Society to Recycle-Oriented Society
    - 3.1.3. International Concern over Hazardous Wastes
  - 3.2. Definition of Wastes
    - 3.2.1. Definition and Classification of Wastes
    - 3.2.2. Types of Wastes
    - 3.2.3. Properties of Wastes
  - 3.3. Waste Management Processes
    - 3.3.1. Generation of Wastes
    - 3.3.2. Sorting, Collection, Transportation
    - 3.3.3. Intermediate Treatment and Landfilling
  - 3.4. Waste Management System
    - 3.4.1. Responsibility for Waste Management
    - 3.4.2. System for Environmental Preservation
  - 3.5. Waste Control Policies in the 21st Century
    - 3.5.1. Order of Priority of Waste Control Policies
    - 3.5.2. Building an Integrated Management System – Concept of Zero Emissions
- 4. Concluding Remarks

**Water Resources Engineering**

129

Nobuyuki Tamai, *Kanazawa University, Japan*

1. Introduction
  - 1.1. Hydraulics for Rivers
  - 1.2. Hydraulics for Pipe Flows
  - 1.3. Fluvial Hydraulics
  - 1.4. Engineering Hydrology
  - 1.5. Maritime Hydraulics
2. Recent Development in Water Resources Engineering
  - 2.1. Worldwide Surge of Environmental Concern
  - 2.2. Sustainability of Water Resources Projects
  - 2.3. Hydroinformatics
  - 2.4. Influence of Global Warming
3. Real Problems in Human Societies
  - 3.1. Flood and Drought
  - 3.2. Dams and Reservoirs
  - 3.3. Hydropower Generation
4. New paradigm—Water Ethics
  - 4.1. How Water Resources Engineering Satisfies Water Ethics?
  - 4.2. Partnered Approach
  - 4.3. Value of Environment

**Survey Engineering**

141

Eihan Shimizu, *University of Tokyo, Japan*

1. Introduction
  - 1.1. Brief Historical Review
  - 1.2. Geodetic Surveying and Plane Surveying
2. Fundamentals of Plane Surveying
  - 2.1. Plane Coordinate System
  - 2.2. Vertical Datum
  - 2.3. Errors in Surveying and Their Adjustments
3. Basic Survey Measurements
  - 3.1. Introduction
  - 3.2. Distance Measurement
  - 3.3. Angle Measurement
  - 3.4. Leveling
  - 3.5. Total Station
4. Control Surveys in Plane Surveying
  - 4.1. Introduction
  - 4.2. Triangulation
  - 4.3. Trilateration
  - 4.4. Traversing
  - 4.5. Control Surveys with GPS
5. Topographic Surveys
  - 5.1. Introduction
  - 5.2. Ground Methods
  - 5.3. Aerial Photogrammetric Methods
  - 5.4. Newer Methods for Topographic Surveys
6. Other Branches of Surveying
7. Surveying and Geographic Information System

**Control Point Surveying and Topographic Mapping**

158

Shoichi Oki, *Land Bureau, National Land Agency, Japan*

1. Introduction
2. Geometric Background
  - 2.1. Ellipsoid
  - 2.2. Transformation between Geodetic Systems
  - 2.3. Geoid
  - 2.4. Datum Reconstruction with Space Geodesy
  - 2.5. Surveying Instruments for Horizontal Survey
    - 2.5.1. Transit
    - 2.5.2. EDM
    - 2.5.3. Total Station
  - 2.6. Survey Instruments for Vertical Survey
3. Horizontal Control
  - 3.1. Datum Origin
  - 3.2. Geodetic Network
  - 3.3. Control Point surveying
    - 3.3.1. Triangulation
    - 3.3.2. Trilateration
    - 3.3.3. Traversing
    - 3.3.4. GPS in Trilateration and Traversing
4. Vertical Control
  - 4.1. Vertical Datum
  - 4.2. Leveling
5. Topographic Mapping
  - 5.1. Photogrammetry
  - 5.2. Ground Method

**Global Positioning System**

173

Tatsunori Sada, *Mitsui Construction Co., Ltd., Japan*

1. Introduction
2. Overview of GPS
  - 2.1. Space Segment
  - 2.2. Control segment
  - 2.3. User segment
  - 2.4. Point Positioning by GPS
  - 2.5. Errors in GPS Observables
  - 2.6. Coordinate System of GPS
3. Relative Positioning by GPS
  - 3.1. Differential GPS
  - 3.2. Carrier Phase Positioning
4. Surveying with GPS
  - 4.1. Static Surveying
  - 4.2. Kinematic Surveying
5. The future of GPS

**Photogrammetry**

190

Hirofumi Chikatsu, *Tokyo Denki University, Japan*

1. Introduction
2. Orientation
  - 2.1. Stereoscopic instruments
  - 2.2. Exterior orientation
  - 2.3. Interior orientation
  - 2.4. Relative orientation
  - 2.5. Absolute orientation
  - 2.6. Successive orientation

- 2.7. Accuracy
- 3. Calibration
  - 3.1. Collinearity equations
  - 3.2. Initial approximations of orientation parameters
  - 3.3. Combined adjustment
  - 3.4. Analytical Aero-triangulation
- 4. Matching
  - 4.1. Area-based matching
  - 4.2. Feature-based matching
- 5. Accuracy in digital photogrammetry
- 6. Application examples of digital photogrammetry
  - 6.1. City modeling
  - 6.2. Human motion analysis
    - 6.2.1. Gait analysis
    - 6.2.2. Ergonomics and management
  - 6.3. Digital archives of Relics
- 7. Into the 21st century

**Satellite Remote Sensing**

205

Eihan Shimizu, *University of Tokyo, Japan*

- 1. Introduction
- 2. Principles of Remote Sensing
  - 2.1. Electromagnetic Radiation
  - 2.2. Spectral Reflectance of Earth Surface Features
- 3. Overview of Representative Satellite Remote Sensing Systems and Their Characteristics
  - 3.1. Characteristics of Satellite Remote Sensing Systems
    - 3.1.1. Spatial Resolution
    - 3.1.2. Spectral Resolution
    - 3.1.3. Temporal Resolution
  - 3.2. Representative Satellite Remote Sensing Systems
- 4. Fundamentals of Data Processing
  - 4.1. Color Composite Imaging
  - 4.2. Image Classification
- 5. Recent Trends of Satellite Remote Sensing

**Geographic Information System**

217

Myoung-Young Pior, *University of Meikai, Japan*

- 1. Introduction
- 2. Types of Data used in GIS
  - 2.1. Graphic Data
    - 2.1.1. Graphic Entities
    - 2.1.2. Graphic Data Models
    - 2.1.3. Data Layer
  - 2.2. Nongraphic Data
    - 2.2.1. Attributes
    - 2.2.2. Topological Relationships
    - 2.2.3. Map Annotations
- 3. Data Acquisition and Data Base Maintenance
  - 3.1. Data Acquisition
    - 3.1.1. Generating New Digital Data
    - 3.1.2. Acquiring Existing Digital Data
  - 3.2. Data Base Maintenance
- 4. Spatial Data Analysis and Output Production
  - 4.1. Spatial Data Analysis

- 4.1.1. Measurement Analysis
- 4.1.2. Spatial Relationship Analysis
- 4.1.3. Buffering
- 4.1.4. Overlay
- 4.1.5. Thiessen Polygon
- 4.1.6. Network Operations
- 4.1.7. Digital Terrain Analysis
- 4.2. Output Production
- 5. GIS Applications
- 6. Other Similar Systems
  - 6.1. LIS (Land Information System)
  - 6.2. AM/FM (Automated Mapping/Facility Management) System
  - 6.3. CAD/CAM (Computer Aided Design/Computer Aided Manufacturing)

**Construction and Structural Engineering**

232

Atsuhiko Machida, *Saitama University, Japan*

- 1. Introduction
- 2. Structural Type
- 3. Structural Materials
- 4. Structural Analysis
- 5. Structural Design
- 6. Construction Management

**Structural Types**

238

Manabu Ito, *University of Tokyo, Japan*

- 1. Definition of Structure
- 2. Tension Structure
- 3. Arch
- 4. Column and Tower
- 5. Truss
- 6. Beam
- 7. Rigid Frame
- 8. Plane Structure
- 9. Spatial Structure
- 10. Selection of Structural Type

**Structural Analysis**

249

Worsak Kanok-Nukulchai, *Asian Institute of Technology, Thailand*

- 1. Structural System
- 2. Structural Modeling
- 3. Linearity of the Structural System
- 4. Definition of Kinematics
- 5. Definitions of Statics
- 6. Balance of Linear Momentum
- 7. Material Constitution
- 8. Reduction of 3D Constitutive Equations for 2D Plane Problems
- 9. Deduction of Euler-Bernoulli Beams from Solid
- 10. Methods of Structural Analysis
- 11. Discrete Modeling of Structures
- 12. Matrix Force Method
- 13. Matrix Displacement Method
- 14. Trends and Perspectives

**Earthquake Protection** 282Motohiko Hakuno, *University of Tokyo, Japan*

1. Introduction
2. Some Recent Earthquakes: Important Observations and Lessons
3. Conclusion

**Structural Stability and Nonlinear Behavior** 298H. Iemura, *Kyoto University, Japan*

1. Introduction
2. Nonlinear Materials and Members
3. Structural Limit States
4. Structural Failures
  - 4.1. Buckling Failures
  - 4.2. Impact Failures
  - 4.3. Shear Failures
  - 4.4. Flexural Failures
5. Inelastic Behavior
  - 5.1. Hysteretic Restoring Force
  - 5.2. Inelastic Energy Absorption
  - 5.3. Inelastic Earthquake Response
6. Earthquake Energy Partitioning
7. Structural Deterioration
8. Damage Index

**Earthquake Resistant Design** 305Masanori Hamada, *Waseda University, Japan*

1. Seismic Coefficient Method
2. Response Spectrum
3. Modified Seismic Coefficient Method
4. Elasto-Plastic Response and Ultimate Strength of Structures
5. Performance-Based Design
6. Earthquake Ground Motion for Design
7. Dynamic Response Analysis
8. Response Displacement Method
9. Seismic Diagnosis and Retrofitting

**Earthquake Resistant Bases and Foundations** 315Kohji Tokimatsu, *Tokyo Institute of Technology, Japan*

1. Introduction
2. Ground Failures Other than Soil Liquefaction
  - 2.1. Slope Failures
  - 2.2. Debris Flow
3. Ground Failures Associated with Soil Liquefaction
  - 3.1. Soil Liquefaction
  - 3.2. Mechanism of Soil Liquefaction
  - 3.3. Liquefaction-induced Lateral Spreading
  - 3.4. Pile Damage Resulting from Liquefaction-induced Ground Displacement
4. Ground Motion Characteristics in Soft and Liquefied Soils
5. Simplified Procedure for Soil Liquefaction Evaluations
6. Liquefaction Remediations
7. Simplified Design Method for Pile Foundations

- 7.1. Estimation of Stress and Deformation of Pile
- 7.2. Estimation of Cyclic Ground Displacement
- 7.3. Estimation of Permanent Ground Displacement near Waterfront
- 8. Base Isolation

**Earthquake-Resistant Building Construction** **334**  
 Shunsuke Otani, *The University of Tokyo, Japan*

- 1. Introduction
- 2. Historical Development
- 3. Seismic Actions
  - 3.1. Characteristics of Earthquake Motion
  - 3.2. Lateral Response in Buildings
- 4. Performance Requirements of Buildings
  - 4.1. Life Safety Limit States
  - 4.2. Reparability Limit States
  - 4.3. Serviceability Limit States
- 5. Capacity Design Method
- 6. Seismic Isolation and Vibration Control
- 7. Retrofitting of Existing Buildings

**Safety Analysis** **344**  
 Masaru Hoshiya, *Musashi Institute of Technology, Japan*

- 1. Design Principle
- 2. Uncertainties for Structural Systems and Acting Loads
- 3. Safety Factor and Probability of Failure
- 4. Design Practice
- 5. Safety Goals and Structural Performance

**Index** **349**

**About EOLSS** **357**

**VOLUME II**

**Geotechnical Engineering** **1**  
 Kenji Ishihara, *Chuo University, Japan*

- 1. Introduction
- 2. Subsurface Investigation for Site Characterization
  - 2.1. Standard Penetration Test (SPT)
  - 2.2. Cone Penetration Test (CPT)
  - 2.3. Plate Loading Test
  - 2.4. Geophysical Investigations
    - 2.4.1. Downhole and Uphole Method
    - 2.4.2. Crosshole Method
- 3. Foundations
  - 3.1. Types of Foundations
    - 3.1.1. Individual Column Footing
    - 3.1.2. Continuous Foundation
    - 3.1.3. Mat or Raft Foundation
    - 3.1.4. Pile Foundation

- 3.2. Methods of Pile Installation
- 3.3. Design Tenets for Footing Foundation
- 3.4. Pile Foundation
  - 3.4.1. Criteria for Pile Design
- 4. Earth Pressure and Open Cuts
  - 4.1. Earth Pressure on Retaining Wall
  - 4.2. Earth Pressure in Open Cut
  - 4.3. Ground Deformation Induced by Open Excavation
- 5. Ground Improvement
  - 5.1. Replacement
  - 5.2. Sand Drain and Dewatering for Clay Deposits
  - 5.3. Prefabricated Vertical Drain (PVD)
  - 5.4. Compaction of Sand Deposits
    - 5.4.1. Vibro-floatation
    - 5.4.2. Sand Compaction Pile (SCP)
    - 5.4.3. Drainage Method for Sandy Soils
  - 5.5. Other Improvement Methods for Cohesive Soils
    - 5.5.1. Vibro-Compaction in Cohesive Soil Deposits
  - 5.6. Dynamic Compaction
  - 5.7. Solidification Technique
    - 5.7.1. Permeation Grouting
    - 5.7.2. Jet Grouting
    - 5.7.3. Deep Mixing Method (DMM)
- 6. Underground Development
  - 6.1. Tunneling in Soft Grounds
    - 6.1.1. Shield Tunneling
  - 6.2. Stability of Tunnel Heading
  - 6.3. Ground Movement

## Soil Mechanics

53

Kenji Ishihara, *Science University of Tokyo, Japan*

- 1. Introduction
- 2. Definition of Property Indices
  - 2.1. Definition of Basic Property Indices
    - 2.1.1. Void Ratio,  $e$
    - 2.1.2. Saturation Ratio,  $S_r$  (%)
    - 2.1.3. Water Content,  $\omega$  (%)
    - 2.1.4. Bulk or Wet Unit Weight  $\gamma$  or  $\gamma_t$
    - 2.1.5. Dry Unit Weight  $\gamma_d$
    - 2.1.6. Unit Weight and Specific Weight of the Solid Phase  $\gamma_s$  and  $G_s$
    - 2.1.7. Buoyant Unit Weight or Submerged Unit Weight,  $\gamma^1$
  - 2.2. Relations among Property Indices
  - 2.3. Sieve Analysis and Grain Composition
    - 2.3.1. Grain Composition
  - 2.4. Consistency of Fine-Grained Soils
    - 2.4.1. Liquid Limit and Plastic Limit
    - 2.4.2. Plasticity Index
- 3. Compaction of Soils
- 4. Seepage of Water through Soils
  - 4.1. Darcy Law
    - 4.1.1. Measurement of Permeability Coefficient
  - 4.2. Seepage Instability
    - 4.2.1. Boiling in Sand Deposits
    - 4.2.2. Piping in Cohesive Soils
    - 4.2.3. Filter
- 5. Consolidation of Clay

- 5.1. Compressibility of Clays
- 5.2. Normal Consolidation and Overconsolidation
- 5.3. Theory of Consolidation
- 5.4. Ground Settlement Due to Pumping Water
6. Strength of Soil
  - 6.1. Shear Strength of Granular Soils
  - 6.2. Shear Strength of Cohesive Soils
  - 6.3. Shear Strength of Soils in General
  - 6.4. Environments of Drainage Influencing Shear Strength of Soils
    - 6.4.1. Dilatancy of Granular Materials
    - 6.4.2. Undrained Shear
    - 6.4.3. Drained Shear
    - 6.4.4. Excess Pore Water Pressure
  - 6.5. Undrained Shear Strength of Clays
7. Earth Pressure
  - 7.1. Rankine Earth Pressure Theory
  - 7.2. Coulomb Earth Pressure Theory
8. Bearing Capacity of Foundations
  - 8.1. Background Consideration
9. Stability Analyses of Slopes
  - 9.1. Stability Analysis for a Simple Case
  - 9.2. Stability Analysis for General Slopes
  - 9.3. Simple Method (Swedish Method)
  - 9.4. Bishop Method
  - 9.5. Determination of the Factor of Safety
  - 9.6. Conduct of Stability Analysis
    - 9.6.1. Design of Earth Structures
    - 9.6.2. Evaluation of Degree of Safety for Existing Earthfills and Natural Slopes
    - 9.6.3. Back-analysis of Collapsed Slopes

**Engineering Geology**

**108**

David M. Cruden, *Department of Civil and Environmental Engineering and Earth and Atmospheric Sciences, University of Alberta, Canada*

1. Characteristics Properties of Minerals
  - 1.1. Definitions and Classification
  - 1.2. Optical Properties
  - 1.3. Crystallographic Properties
  - 1.4. Other Properties
  - 1.5. Identification Strategy
2. Igneous Rocks
  - 2.1. Classification by Texture
  - 2.2. Composition
3. Sedimentary Rocks
  - 3.1. Classification
  - 3.2. Clastic Sediments
  - 3.3. Chemical Sediments
  - 3.4. Organic Sediments
  - 3.5. Composition of Sedimentary Rocks
  - 3.6. Structures in Sedimentary Rocks
4. Metamorphic Rocks
  - 4.1. Definitions
  - 4.2. Types of Metamorphism
  - 4.3. Mineralogical Changes as a Function of Temperature and Pressure
  - 4.4. Metamorphic Texture
  - 4.5. Nomenclature
5. Ores, Industrial Minerals and Fossil fuel

- 5.1. Explanation of Terms
- 5.2. Ores
- 5.3. Fossil Fuels
- 5.4. Industrial Minerals
- 6. The Shape of the Land Surface
  - 6.1. Topographic Maps
  - 6.2. Aerial Photographs
  - 6.3. Erosion by Water
  - 6.4. Alluvial Deposits
  - 6.5. Aeolian Deposits
- 7. Erosion and Deposition by Gravity and Ice
  - 7.1. Types of Slope Movement
  - 7.2. Erosion by Flowing Ice
  - 7.3. Erosion by Glacial Meltwater
  - 7.4. Glacial Deposits
- 8. Geological Maps
  - 8.1. Introduction
  - 8.2. The Orientation of Surfaces
  - 8.3. Folds
- 9. The Record in the rocks
  - 9.1. Faults
  - 9.2. Plutons
  - 9.3. Unconformities
  - 9.4. Relative Age of Rocks
  - 9.5. The Geological Time-Scale
- 10. The Dynamic Earth
  - 10.1. Plate Motion
  - 10.2. Volcanoes
  - 10.3. Earthquakes

**Mining Engineering and Mineral Transportation**

132

Yuichi Nishimatsu, *Sumitomo Metal Mining Co. Ltd., Japan*

- 1. Introduction
- 2. A Historical Review of Mining Engineering
- 3. Features of Mining
  - 3.1. Industrial and Technical Features
  - 3.2. Geographical Separation between Production and Consumption of Minerals
- 4. Development and Operation of Mines
- 5. Mining and Mining Equipments in Underground Mines
  - 5.1. Mining Operation in the Working Face of Metal Mines
  - 5.2. Mining Operation in the Working Face of Coal Mines
  - 5.3. Excavation and Loading in the Driving Face of Roadway
- 6. Mineral Transportation in Underground Mines
  - 6.1. Mineral Transportation in Level Roadway
  - 6.2. Rope Haulage and Shaft Winding
- 7. Rock Pressure and Support in Underground Mines
  - 7.1. Rock Pressure
  - 7.2. Support System in the Stope and Working Face
  - 7.3. Support in Roadway
- 8. Surface Mining
  - 8.1. Features of Surface Mining
  - 8.2. Open Pit Mine of Massive Mineral Deposit
  - 8.3. Strip Mining of Coal Deposits
  - 8.4. Surface Mining of Alluvial Mineral Deposit (Placer Mining)
- 9. Water Drainage and Mine safety
  - 9.1. Water Drainage in Mines

- 9.2. Ventilation and Mine Safety
- 10. Environmental Impact and Reclamation in Mining
- 11. Conclusion

**Surface Mining Methods and Equipment** **155**

Jiro Yamatomi, *The University of Tokyo, Japan*  
 Seisuke Okubo, *The University of Tokyo, Japan*

- 1. Surface Mining Methods
  - 1.1. Classification of Surface Mining Methods
  - 1.2. Open Pit vs. Underground Mining Methods
  - 1.3. Open Pit Mining
  - 1.4. Open Cast Mining
  - 1.5. Placer Mining
  - 1.6. Solution Mining
- 2. Surface Mining Machinery

**Underground Mining Methods and Equipment** **171**

Seisuke Okubo, *The University of Tokyo, Japan*  
 Jiro Yamatomi, *The University of Tokyo, Japan*

- 1. Underground Mining Methods
  - 1.1. Classification of Underground Mining Methods
  - 1.2. Underground Operations in General
  - 1.3. Room-and-pillar Mining
  - 1.4. Sublevel Stoping
  - 1.5. Cut-and-fill Stoping
  - 1.6. Longwall Mining
  - 1.7. Sublevel Caving
  - 1.8. Block Caving
- 2. Underground Mining Machinery

**Drilling Machines** **194**

Hideshi Watanabe, *Furukawa Co. Ltd., Japan*

- 1. Introduction
  - 1.1. Principles of Rock Drilling
  - 1.2. Drill Adaptability
- 2. Construction of Drilling Equipment
  - 2.1. Working Fluid
  - 2.2. Thrust and Feed Equipment
  - 2.3. Rotation System
  - 2.4. Drilling Rod
  - 2.5. Cuttings Removal (Flushing)
  - 2.6. Bit
  - 2.7. Supporting Equipment and Carriers
- 3. Mechanical Principles of Percussion Drill
  - 3.1. Construction of Percussion Rock Drills
  - 3.2. Features of Percussion Rock Drills
  - 3.3. Output Parameters
  - 3.4. Principles of Elastic Wave Propagation and Penetration Resistance of the Bit
- 4. Classification of Rock Drills
  - 4.1. Percussion Rock Drills
    - 4.1.1. Hand-held Rock Drills (Pneumatic)
    - 4.1.2. Drifter

- 4.1.3. DTH
- 4.2. Rotary Drill
- 5. Applications of Drilling Equipment
  - 5.1. Underground Mining
  - 5.2. Surface Mining

<b>Offshore Drilling and Production Equipment</b>	<b>217</b>
<i>Shoichi Tanaka, The University of Tokyo, Japan</i>	
<i>Yo Okada, Japan Oil Engineering Co., Japan</i>	
<i>Yuichiro Ichikawa, Japan Drilling Co., Ltd., Japan</i>	

- 1. Introduction
- 2. Outline of Rotary Drilling Method
- 3. Offshore Drilling Structures
  - 3.1. Technical Features of Offshore Drilling
  - 3.2. Mobile Bottom-supported Rigs
    - 3.2.1. Jack-up Drilling Rigs (Jack-up Rigs, Self-elevating Drilling Rigs)
    - 3.2.2. Submersible Drilling Rigs (Submersible Rigs, Swamp Barges)
    - 3.2.3. Tender-Assisted Platforms and Tenders
  - 3.3. Floating Offshore Drilling Rigs (Floaters)
    - 3.3.1. Technologies Required by Floaters
    - 3.3.2. Drillships
    - 3.3.3. Semisubmersible Drilling Rig
  - 3.4. Location Surveys for Offshore Drilling
- 4. Offshore Oil/Gas Production Systems
  - 4.1. Brief History of Offshore Production Systems
  - 4.2. Various Types of Offshore Platforms
    - 4.2.1. Bottom-supported Platforms
    - 4.2.2. Floating Platforms
  - 4.3. Subsea Production Systems
    - 4.3.1. Subsea Christmas Trees
    - 4.3.2. Subsea Manifolds
    - 4.3.3. Subsea Boosting and Processing
    - 4.3.4. Subsea Control System
  - 4.4. Prospect of Offshore Production System

<b>Mineral Comminution and Separation Systems</b>	<b>249</b>
<i>Toshio Inoue, University of Tokyo, Japan</i>	

- 1. Significance of Mineral Beneficiation
- 2. Overview of Mineral Processing Systems
- 3. Components of Mineral Beneficiation Technology
- 4. Comminution System
- 5. Gravity Separation
- 6. Flotation
- 7. Magnetic Separation
- 8. Electrostatic Separation
- 9. Solid-Liquid Separation and Waste Treatment
- 10. Other Methods of Mineral Extraction
- 11. Disposal of Solid Wastes and Waste Water Treatment
- 12. Conclusion

<b>Surface Mining Transportation Systems</b>	<b>275</b>
<i>Takao Nagai, Komatsu Ltd., Japan</i>	

1. Surface Mining
  - 1.1. Surface Mining Operation
  - 1.2. Surface Mining Methods
2. Equipment Used for Surface Mining
  - 2.1. Surface Mining Equipment
  - 2.2. Transportation System Used in Surface Mining
    - 2.2.1. Hauling Truck
    - 2.2.2. Dragline and Stripping Shovel
    - 2.2.3. Bucket Wheel Excavator
    - 2.2.4. Belt Conveyor
    - 2.2.5. Motor Scraper
3. Transportation Management System for Surface Mining

**Underground Mining Transportation Systems**

**287**

*Kikuo Matsui, Kyushu University, Japan*

1. Introduction
2. From Surface to Underground/Vice Versa
  - 2.1. Shafts
    - 2.1.1. Cage
    - 2.1.2. Skips
  - 2.2. Inclined Shafts or Inclined Drifts
3. Underground Transport for Materials and Equipment
  - 3.1. Track System/Rail-mounted Systems
  - 3.2. Trackless Systems
  - 3.3. Combined Systems
  - 3.4. Longwall Equipment Transport
4. Ore/Coal Transport
  - 4.1. Metalliferous Mines
  - 4.2. Coal Mines
    - 4.2.1. Heading Face Area
    - 4.2.2. Longwall Face Area
    - 4.2.3. Belt Conveyors
    - 4.2.4. Surge Control for Belt Conveyor Haulage
    - 4.2.5. Rail Systems
    - 4.2.6. Shaft Winding
5. Personnel Transport
  - 5.1. Access to Underground
  - 5.2. Personnel Transport in Working Sites
    - 5.2.1. Trackless Personnel Transport Systems
    - 5.2.2. Track-mounted Personnel Transport Systems
  - 5.3. Belt Conveyor Systems
  - 5.4. Other Systems

**Mining and Exploration for Mineral Resources**

**309**

*Takashi Nishiyama, Kyoto University, Japan*

*Katsuhiko Kaneko, Hokkaido University, Japan*

1. Introduction
2. Geologic Prospecting
  - 2.1. Ore Deposits Formed During Magmatic Process
    - 2.1.1. Separation and Concentration due to Crystallization in Basic Magma at Specific Places and at Specific Stages
    - 2.1.2. Separation and Concentration due to Immiscibility in the Melt
  - 2.2. Hydrothermal Deposits
    - 2.2.1. Porphyry-type Deposits

- 2.2.2. Kuroko-type Massive Sulfide Deposits
- 2.2.3. Skarn-type Deposits
- 2.2.4. Vein-type Deposits
- 2.3. Sedimentary Deposits
- 3. Geophysical Prospecting
  - 3.1. Gravity Survey
  - 3.2. Magnetic Survey
  - 3.3. Electric Survey
    - 3.3.1. Self-potential Method
    - 3.3.2. Resistivity Method
    - 3.3.3. Induced Polarization Method
    - 3.3.4. Electromagnetic Method
  - 3.4. Seismic Survey
    - 3.4.1. Reflection Method
    - 3.4.2. Refraction Method
  - 3.5. Radiometric Survey
- 4. Geochemical Prospecting
  - 4.1. Basic Principles
  - 4.2. A Few Practical Geochemical Explorations
  - 4.3. Fluid Inclusion and Isotope Studies
